PRICE GUARANTEE

Since 1981, we have led the industry by continuing to offer the lowest national prices while providing quality service. Many companies have come and gone trying to imitate our quality and service. If by some oversight we do not have the lowest prices advertised on the products you desire, then we would appreciate the opportunity to rectify this oversight.

HARD TO FIND SOFTWARE TITLES

SPINNAKER SOFTWARE - \$9.95 EACH

(all titles of cartridge)

ADVENTURE CREATOR (age 8-adult)

Children use their own imaginations to create their own adventures while learning about computer programming design and logic.

ALF IN THE COLOR CAVES (age 3-6)

As children maneuver Alf through the mazes they improve their routing and predictions skills and it helps them to understand cause-and-effect relationships.

ALPHABET ZOO (ages 3-8)

Strengthens letter recognition skills as children associate letters of the alphabet with the sounds they represent.

DELTA DRAWING (age 4-adult)

An easy and friendly introduction to computer learning. Builds an understanding of procedural thinking and encourages children to exercise their creativity.

FACEMAKER (age 3-8)

Helps children become comfortable with computer fundamentals such as: menus, cursors, graphics, and improves memory and concentration.

KINDERCOMP (ages 3-8)

Helps children improve their reading readiness and counting skill and familiarizes them with the keyboard.

KIDS ON KEYS (age 3-9)

Familiarizes children with the computer keyboard as they learn to identify numbers, letters, and words and associate them with images on the screen.

STORY MACHINE (age 5-9) *Won't work on XL/XE*

Helps children learn to write correctly and develop a positive attitude towards writing.

HAYDEN SOFTWARE - \$9.95 EACH

(all titles on disk)

DON'T SHOOT THAT WORD (all ages)

A fun way to practise recognizing words by associating them with pictures.

MONKEY SEE, MONKEY SPELL (all ages)

Children will play for hours as they race the monkey up and down the Letter Tree to spell correctly the objects pictured at the bottom of the screen.

MICRO ADD/SUBTRACT (pre-school)

Colorful animation and familiar childhood tunes teach pre-schoolers the basic principles of addition and subtraction.

MICRO SUBTRACTION (pre-school)

An animated series of exercises to teach children number values and the basics of subtraction.

MICRO MULTIPLICATION (pre-school)

A colorful animated series of exercises to teach children number values and the basics of multiplication.

MICRO DIVISION (pre-school)

A colorful series of exercises to teach children number values and the basics of division.

MATCH UP! (pre-school)

Colorful pictures engage pre-schoolers in matching and sorting a series of familiar objects.

SHAPE UP! (pre-school)

Pleasing animation and amusing sound effects will delight your pre-schoolers as they learn shape discrimination.

FISHER PRICE SOFTWARE \$8.95

MEMORY MANOR (on cartridge age 4-8)

Captivating pictures and sound help improve memory skills and concentration. (limited quantity)

THUNDER MOUNTAIN - \$8.95 EACH OR ALL 6 FOR \$39.95

(all titles on disk - ages 4-8)

ABC's WITH THE TINK TONKS

Five educational activities help children learn ABC order and become familiar with the computer keyboard. Offers multiple levels of difficulty.

COUNT AND ADD WITH THE TINK TONKS

An entertaining program that teaches basic math concepts, practice counting and presents simple problems to solve.

SUBTRACTION WITH THE TINK TONKS

Strengthen math skills by solving basic subtraction problems in context with multiple levels of difficulty. Lively animation and original music throughout.

SPELLING WITH THE TINK TONKS

An interactive story with five multilevel educational activities including spelling and vocabulary building.

BEING A SMART THINKER WITH THE TINK TONKS

Bold, high-resolution graphics help to strengthen concentration, memory, and visual discrimination skills.

DEVELOP THINKING SKILLS WITH THE TINK TONKS

Strengthens reasoning skills, logic, critical thinking, concentration, memory, and visual discrimination with multiple levels of difficulty.

SIERRA ON-LINE SOFTWARE

MR. COOL - \$15.95 (cartridge - arcade)

With Mr. Cool you'll have a blast in the furnace, being cool as a cube, dodging fireballs, and side stepping springs. He'll hop into the hearts of game players young and old.

BC's QUEST FOR TIRES - \$9.95 (disk - arcade)

This fast moving game features Thor zipping through the comic strip world of B.C. on his prehistoric unicycle in an effort to rescue Cute Chick from the hungry dinosaur.

CROSS FIRE - \$9.95 (disk - arcade)

The aliens have you surrounded and laser shots fly from all directions. If you are to live, you'll have to concentrate on where the shots are coming from and where you're going so you don't get caught in the Cross Fire.

JAWBREAKER - \$9.95 (disk - arcade)

This arcade game takes you to the candy store for a wild game of tag. If you can eat all the sweets, it's off to the store for another game. A merry maze chase game that will leave you hungry for more.

OIL'S WELL - \$9.95 (disk - arcade)

You've hit oil and struck it rich but other oil barons have sabotaged your operation. Watch out for the steel-munching oozies and explosive land mines they've planted. Don't let them cheat you out of your millions!

SESAME STREET - \$9.95 EACH

(all titles on disk)

ERNIE'S MAGIC SHAPES (pre-school)

Provides a playful setting featuring lively colorful graphics in which children practice visual discrimination.

BIG BIRDS SPECIAL DELIVERY (pre-school)

Improves a child's understanding of the attributes of form, class, and function while having fun!

ASTROGROVER (pre-school)

Offers experience with early number concepts in counting, adding and subtracting while having fun in outer space.

ADVENTURE INTERNATIONAL

SCOTT ADAM'S TEXT ADVENTURES - \$14.95

Includes all twelve text adventure stories and hint book. (disk)

THE SORCERER OF CLAYMORGUE CASTLE - \$8.95

(disk - graphics and text adventure)

SPIDERMAN - \$7.95

(disk - graphics and text adventure)

THE HULK - \$6.95

(disk - graphics and text adventure)

OLIN IN EMERALD - \$9.95

(disk - educational graphics & text adv. age 7-14)

MIDWAY BATTLES - \$7.95

(disk - simulation)

Antic Summer Subscription Drive

Disk issues now \$5 each—plus Free mini calculator

In this issue you're seeing the payoff of **Antic's** successful Newsroom write-in campaign. An excellent new product arrived for the 8-bit Atari because **Antic** readers answered this magazine's call and took action to benefit the entire Atari community.

For six and a half years, through every change in the Atari market, **Antic** has been the world's best-selling publication meeting Atari users' needs for dependable Atari news, reviews and programs. At this writing, **Antic** is the *only* magazine covering all Atari computer models every month—and there's still *plenty* of Atari news to cover.

Antic wants to continue delivering as much high-quality service as we always have. And this magazine can keep on going for year after year—as long as enough committed Atari users support our efforts.

So that's why **Antic** is calling for 5,000 more disk subscribers this summer. In order for us to help your Atari computers keep doing all the jobs you want, **Antic** is looking for your direct support right now.

\$5 PER DISK ISSUE

We'll make it easy for you to get all the benefits of the **Antic** Monthly disk. For this summer, **Antic's** Disk Subscription price is lowered to only \$59.95. That's just \$5 apiece for 12 months of **Antic** Magazine plus Disk!

It's the best deal ever offered by **Antic**. For only \$59.95 you get 12 double-sided disks crammed full of useful, entertaining Atari software including the monthly Super Bonus, plus 12 information-packed issues of **Antic** Magazine. You pay just *half* of the \$9.95 newsstand single disk/magazine price—or \$20 less than the regular \$79.95 subscription price, for a 25% savings.

FREE MINI CALCULATOR

This Summer Subscription Drive offer is guaranteed only until *September 1, 1988*. Order your special \$59.95 **Antic** Disk Subscription before the deadline and you'll also receive a special Free gift—the Atari Mini-Card Solar Calculator, a \$5.95 value. This full-featured calculator is no bigger than a credit card. It bears the Atari logo and comes with a complete instruction booklet.

To start your special \$59.95 **Antic** Disk Subscription right away (or upgrade your current non-disk subscription), just phone Toll-Free to Antic Customer Service at (800) 234-7001 and use your Visa or MasterCard. Or simply mail a \$59.95 check to Antic Disk Special, 544 Second Street, San Francisco, CA 94107.

Let's continue working together to make things better for Atari users.

Nat Friedland
Editor, Antic

AVATEX CORRECTION

Matt Ratcliff's *Choosing Your Modem* (Antic, May 1988) was mistaken in saying that the basic Avatex 1200 baud modem is not acceptable for running a bulletin board because it requires you to switch manually between 300 and 1200 baud. You only need to change baud speeds manually for *outgoing* calls. The modem automatically adjusts to the baud rate of incoming calls, which is all a BBS sysop needs to be concerned about. I have no problems running the LDS/BBS in San Jose—(408) 226-6523—with an Avatex and BBS Express! software.

Rich Anderson
San Jose, CA

JERSEY TRANSPLANT

As a past president of JACG, I too read Paul Tupaczewski's ACENNJ disk newsletter with pleasure and interest. But it is cer-

tainly not the first on-disk users group newsletter. For more than two years, Bit Byter User Club of West Germany has published an excellent on-disk newsletter, which we received at JACG as early as the spring of 1986. The Brooklyn Atari Society published another excellent on-disk newsletter in 1983 and 1984.

I should add that many users groups here in Germany publish their newsletters on disk—in fact, there's a public domain program here that makes the editor's task much easier than you'd think.

Joseph Kennedy
Marl, West Germany

WORDPERFECT UPDATE

The latest update disks of WordPerfect 4.1 for the Atari ST are dated March 25, 1988 and are currently being distributed free to all registered Atari WordPerfect owners.

We apologize for any problems you may have experienced with past copies of the Atari version of WordPerfect. We recog-

nize that the program was released too early and with too many bugs. We have since attempted to rectify the problem as quickly as possible by providing free updates as the software is improved and bugs are fixed. We feel this latest update is up to our standards of quality and will provide you with a clean and efficient piece of software. More revisions will be made as necessary.

We are dedicated to the Atari market and plan to introduce some of our other products into that market in the near future, including WordPerfect Library. We hope you will find this latest revision satisfactory and enjoyable as you use it.

Rebecca Mortensen
WordPerfect Corp.

102 laptop (little brother to the reader's Tandy 200) after reading the *Laptop-to-Atari Connection* (Antic, November 1987). I hooked it to my Avatex 1200hc modem using a male-to-male phone adapter. Sure, faster transmission rates are possible through the RS-232 serial interface, but that would mean disconnecting the modem each time, so I settle for the slower 300 baud rate.

I use the Tandy's TELECOM program with the parameters M8N1E, and 850 Express! on my Atari. Set the Atari program to ASCII format and half duplex. Make sure the switches on the side of the Tandy are set for Direct Connect, Originate Call. Then tell the Atari program to answer a call, and press F4 on the Tandy. You will hear a raspy tone from the Tandy and when it stops, you should be connected.

Troy Carpenter
Harlingen, TX

SUPERDOS MEMORY

Thanks to Matthew Ratcliff for his enthusiastic review of SUPERDOS (Antic, June 1988). I would like to clarify the point he brought up about the amount of memory SUPERDOS occupies. In Atari XL/XE and expanded 800 models, available free memory for BASIC is 31093 bytes—only about 1K less than DOS 2.0 or 2.5. That's for two single-density or double-density disk drives. The LOMEM value printed in the review only applies to computers with 48K or less memory and DUP.SYS loaded in. This makes the DOS menu instantly available (no MEM.SAV). Of course, 48K Atari owners could easily configure their systems for more available memory and less convenience.

Charles Cherry
Technical Support

BASIC DIRECTORY

The following BASIC line, entered in direct mode, lists the disk directory without affecting the program in memory. Afterwards, it always generates an ERROR 136—but don't be alarmed: just type END.

```
OPEN #1,6,0,"D:*. *":FOR X=1 TO
IE9:GET #1,A:PRINT CHR$(A);NEXT X
Phillip Chow
Cleveland, OH
```

FILENAME\$

In the following short routine, I can't figure out how to LOAD a filename into A\$. It always tries to LOAD a program called D:A\$.

```
10 REM TEST
20 DIM A$(100)
30 POSITION 2,10
40 ? "ENTER THE FILE
TO BE LOADED";
50 INPUT #16,A$
60 LOAD A$
```

I also tried LOAD "D1:A\$" and LOAD "D1:":A\$; in line 60 to no avail.

Jeff Guadagnolo
Hamilton, Ontario
Canada

Try the approach below.—ANTIC ED

```
10 REM TEST
20 DIM A$(20),B$(20)
30 A$="D1:"
40 POSITION 2,10
50 ? "ENTER THE FILE
TO BE LOADED ";
60 INPUT #16,B$
70 A$(4)=B$
80 LOAD A$
```

R-VERTERS IN S*P*A*C*E

In *SX212 Software* (I/O, April 1988), you recommended using Atari's new SX212 modem with the R-Verter handler widely distributed by users groups and online services. The R-Verter works with both AMODEM and 850 Express! to let 8-bit owners use this fine modem without an interface until Atari releases SX Express! software.

S*P*A*C*E (Seattle & Puget Sound Atari Computer Enthusiasts) developed this handler, then mailed copies to other clubs nationwide and uploaded it onto key local and national bulletin boards. S*P*A*C*E members Marc Ingle and Tom Neitzel successfully adapted the old R-Verter handler for the SX-212. The latest version is SX212 Companion! for use with 850 Express! It's available from most users groups as well as GENIE and CompuServe.

Nick Berry
Corresponding
Secretary
S*P*A*C*E

SOFTWARE WANTED!

The success of Antic's previous write-in campaigns has prompted this new section of the I/O Board. Software Wanted! will list title requests sent in by Atarians hoping to inspire Antic readers to begin writing to the Presidents of software companies and calling for Atari conversions.

DESIGNER WOES

I have a Legend 808 Epson-compatible printer, and Print Shop works fine with it. However, when I choose the Epson option in the Designer Labels program (Antic, April 1987), I get an extra space between the lines of my graphic. In fact, this happens no matter which printer I choose. Any suggestions?

Robert Haschalk
Papillon, NE

Your Legend 808 is not 100% Epson-compatible. Antic doesn't have one in the office, but here's what we suggest: In line 2240, change the [CONTROL] [X] character (a small upside-down T) to [CONTROL] [L]. When you RUN the program, use the Epson printer option.—ANTIC ED

I typed in Designer Labels, I even downloaded it from CompuServe, but I can't get it to work with my Atari XMM801, which is supposed to be Epson-compatible.

David McGowan
Edmonton, Canada

Again, we don't have that specific printer to test, but this modification should work. In line 2290, change the [ESC] [LX] to [ESC] [VX] and change the [ESC] [LP] to [ESC] [VP]. NOTE: The P in this second change must be an inverse uppercase P.—ANTIC ED

OH, BROTHER

With one very small exception, I have found that *Mighty Mailer* (Antic, September 1987) performs "as advertised." There is no problem when I print to my Gemini 10X printer, but when I print to my Brother Correctronic 50 electronic type-writer/printer, each address contains a "(" as its initial character. How can that be eliminated?

Bill Chapman Jr.
U.S. Embassy
Vienna, Austria

Mighty Mailer was designed for Epson and Epson-compatible printers. The "(" symbol is part of an Epson printer command which sets the left margin.

Super Disk Bonus

Program by LEN SHIKOWITZ

King Keno Super Bonus

If you enjoy playing Cheapo Keno, this issue's Game of the Month, you'll also want to try your luck with Antic's King Keno July Super Disk Bonus. King Keno is a bigger and more colorful version of the popular bingo-like game. A compiled BASIC program, King Keno delivers most of the speed and power of a pure machine language program. But you don't need any programming language, even BASIC, to run it on 8-bit Atari computers with 48K memory.

King Keno was programmed by Len Shikowitz of San Francisco. The compiled listing is 198 sectors long. If it was printed in the magazine it would consist of at least six pages with nothing but solid-packed data statements.

King Keno is on Side B of this month's Antic Disk. The game has its own built-in Help file which you can select from King Keno's first screen.

To use King Keno, copy KENO.EXE to another disk that contains the DOS 2 files DOS.SYS and DUP.SYS. Put this disk in your drive, remove all cartridges (XL/XE owners press [OPTION]) and turn on your Atari. King Keno will automatically load and run.

Your July 1988 Antic Disk—featuring King Keno as well as the outstanding Top Banner printing program and

every type-in listing from this issue—will be shipped to you within 24 hours after receiving your order. Just phone Toll-Free to the Antic Disk Desk at (800) 234-7001. The monthly disk is only \$5.95 (plus \$2 for shipping and handling) on your Visa or MasterCard. Or mail a \$5.95 check (plus \$2 shipping and handling) to Antic Disk Desk, 544 Second Street, San Francisco, CA 94107.

Programmers: Antic wants to see your most ambitious programs, even those too large or complex for printing as a type-in listing. High-quality programs in any language that has a runtime version are now eligible for consideration as a Super Disk Bonus.

EXTRA JULY FEATURES

Extra bonus features on this month's Antic Disk include seven flashy print fonts for Top Banner and, for ST users, a highly detailed graphic. Help files provide instructions for using these extra bonus files. ■

Free!

This Month's Antic Disk FREE—when you call toll-free to (800) 234-7001 and order your new or upgraded Antic Magazine/Disk subscription for just \$59.95! VISA or Mastercard only.

By MAXIMILLIAN EISSLER
and CHESTER WOZNAK

Cheapo Keno

Gambling thrills without losing your shirt

Cheapo Keno lets you get your gambling fix without losing your shirt—or even leaving your chair. This quick, slick BASIC version of Keno runs on Atari 8-bit computers of any memory size, with disk or cassette.

"I will not play Keno!"

Those five words had become my motto. I would chant them to myself whenever I entered a casino. Unfortunately I would invariably find myself walking away from a Keno machine three or four hours later—and quite a bit poorer.

What was I to do? Getting that Keno fix had become all-important and very expensive—so expensive, in fact, that I had to sell my car, my house, my wife and kids, just to satisfy my dreadful habit.

While walking home from Las Vegas to Cathedral City, California, after a particularly expensive trip to the casino, a thought struck me as my bare back sizzled in the desert sun. Maybe my Atari could be used to satisfy my masochistic desire—and maybe I could save just enough money to buy back my wife and at least one kid. Thus was born Atari Cheapo Keno.

GETTING STARTED

Type in Listing 1, KENO.BAS, check it with TYPO II and SAVE a copy before you RUN it.

The principle of Keno machines is diabolically simple. It's a variation of Bingo or Lotto. You bet from one to four quarters, pick one to 10 numbers on an 80-number grid and start the game. The computer randomly picks 20 num-

SUMMER SPECIAL:

*\$59.95 for 12 double-sided
Antic Disks and Magazines.*

bers. The more correct guesses you have, the more you win.

When RUN, the program draws the grid along with boxes containing the words START, ERASE, BET and PAY. The cursor will be in the BET box. Pressing the joystick button lets you increase your bet.

Move the cursor to a number you want to pick, and press the joystick button to mark it. If you accidentally mark the wrong number or want to change your mind, move to the ERASE box and press the joystick button. This will remove *all* the numbers you picked.

Pressing the joystick button when the cursor is over the PAY box gives you the payoff schedule and a tally of your bets and winnings. After you place your bet and mark your numbers, go to the START box and begin.

The more numbers you pick, the larger the jackpot—and the greater the odds against your winning. Hitting one out of one, for instance, is relatively easy because the odds are one in four. Hitting 10 out of 10, however, is a feat comparable to standing on your head on a merry-go-round and knocking a fly off a pig's back with a slingshot at 100 yards—which might be more impressive than hitting 10 of 10 in Keno.

Several "systems" for winning at Keno have been developed, but since the numbers are picked randomly, these systems usually end up in cold storage. But since you're not playing with real money in Atari Keno, this program might be a good testing ground for your own systems—or a good way to develop your own theories on winning.

PROGRAM TAKE-APART

0-60	Declare variables, set screens.
205-255	Betting routine.
260-275	Erase numbers.
350-420	Main joystick routine.
480-490	Set screen memory pointer to payoff screen.
650-695	Pick computer numbers.
1001-1010	Data for jackpot amount.
1100-1190	Draw payoff screen. ■

Maximillian Eissler is a retired Norwegian Air Force pilot living in Cathedral City, California, and Chester Wozniak is the director of security at a country club in Rancho Mirage, California. This is their first publication in Antic.

If foreign shipping charges exceed the minimum amount, you will be charged the additional amount to get your package to you quickly and safely. All goods are new and include factory warranty. Due to our low prices at sales are final. All defective returns must have a return authorization number. Please call (414)357-8181 to obtain an RA# or your return will not be accepted. Prices and availability subject to change without notice.

continued from page 7

Here's how to adjust Mighty Mailer for your printer: First, read through your printer manual and find the printer code which sets the left margin. Now LOAD the Mighty Mailer program and list line 1240. Find the part of the line which reads:

```
... ? #4; "1"; CHR$(40); FILE ...
```

This Epson printer command, highlighted in boldface, sets the left margin to 40. Change line 1250 the same way, but this time set the left margin to 10 (for the return address).—ANTIC ED

ANTIC PUBLISHER HELP

I can't load Atari Touch Tablet pictures into *Antic Publisher* (Antic, December 1987). When I pass them through the *Rapid Graphics Converter* (Antic, November 1985), I get garbage on the screen.

Nelson Pollack

Take your original Touch Tablet pictures

and use the Rapid Graphics Converter to change them from Micro Illustrator to Micro-Painter files which should work with Antic Publisher.—ANTIC ED

NIGERIAN ATARIAN

I am the financial manager with a medium-sized firm in Lagos and have been a devoted Atari user ever since I bought an 800XL, then an 130XE and a 1040ST. (I still want a hard disk, which would ease my operating problems considerably). Everyone who has seen my system at work is impressed—but they lament the dearth of information and Atari software here in Nigeria. Most of my information comes from my *Antic* subscription, which takes a while to reach me. I need any help that readers could give—ideas, software, magazines, books, etc.

Edosa Obaseki
P.O. Box 70475
Victoria Island
Lagos, Nigeria

Help

GIF GOOF

In the April and May 1988 issues of *Antic*, we said that Spectrum 512 works with CompuServe GIF files. Unfortunately that only gave part of the story. *Antic* should have made it clear that GIF files must first be converted to Spectrum 512 format with Digispec—a \$39.95 program from Trio Engineering, P.O. Box 332, Swampscott, MA 01907. (617) 964-1673.

TAX TEMPLATE FIX

There is an error concerning tax-exempt interest income in the 8-bit 1987 *Federal Income Tax Spreadsheet* (Antic, April 1988) that might have caused some readers to pay too much taxes. The problem is that although tax-exempt interest income must be reported, it is *not* included in gross income. The simplest fix is to just MOVE cell C14 to D14. This way the @SUM(D12:D28) in cell D29 can remain intact and not include your tax-exempt interest income.

Thomas Kelso
Alamogordo, NM

ENTREPRENEUR JUNGLE

Entrepreneur Jungle, the March 1988 Super Disk Bonus, generates an ERROR 2 when used with some older 800XL computers. To avoid this problem, just LOAD "D:ENTRE.BAS" from your March Antic Disk, delete lines 1-3 and then SAVE the modified program to another disk.

Antic welcomes your feedback, but we regret that the large volume of mail makes it impossible for the Editors to reply to everyone. Although we do respond to as much reader correspondence as time permits, our highest priority must be to publish I/O answers to questions that are meaningful to a substantial number of readers.

Mastering CompuServe's New Command System

Guide to all those changes sweeping the SIGs

It has been a little over nine years since CompuServe first introduced its Forum software. Now used by over 130 CompuServe special interest groups (SIGs), the basic look and feel of this software remained consistent despite many changes and revisions.

Meanwhile, during the past seven years CompuServe's navigational command-and-menu software became the system-wide standard because of its intuitive, easy-to-use style. The Forum software menu interface was left untouched for the most part, resulting in two radically different menu systems.

As CompuServe branched off into new markets and its subscriber base grew, it became obvious that it was time to bring Forum software up to the system-wide standard. The main goal was to make it easier for users to concentrate on the *content* of the Forum rather than the *command* system.

Toward that end, CompuServe held several focus group meetings around the country last year (and also sought online feedback) for information on how to improve the Forum environment. The second generation of CompuServe Forum software is now ready and I want to introduce you to the new system.

JOINING A FORUM

As with any local bulletin board system (BBS) or a SIG on a commercial information service, before you can actually use the facilities you must electronically "sign up" as a member. This sign-up is usually nothing more than answering a few simple questions. Joining a Forum generally does not require any commitment from you—you can participate as much or as little as you like.

In past Forum software, if you accessed a Forum where you weren't already a member, you'd see a Visitor's Menu with five choices. If you chose to just visit the Forum, your name and User I.D. were not added to the membership files and you were limited to whatever commands the Forum Administrator (chief system operator) allowed for non-members, usually only the ability to leave a message for the system operator (sysop).

Needless to say, CompuServe wanted a less confusing way for its subscribers to join Forums. So the new software eliminates the visitors menu on all public Forums. Now, when you access a Forum where you're not listed as a member, a visitor's bulletin from the sysop appears. Then you see the Forum's Main Functions menu. One command has been added—JOIN this Forum.

"The most useful program for the Atari since Print Shop!"

FORMS GENERATOR for the Atari 800, 800XL, 65XE, 130XE

Designed by Jeff Brenner, columnist for Computer Shopper magazine, of "Applying The Atari" fame, and author of book and magazine articles in COMPUTE! ANALOG and others

LOOK WHAT YOU CAN DO WITH FORMS GENERATOR:

Purchase merchandise by mail? Next time, send a customized **purchase order form**! Does your home or business ever need **statements, invoices, proposals, job work orders, gift certificates**, etc.? No problem! Use **FORMS GENERATOR's** scrolling spreadsheet-style screen to design almost any form to suit **your exact needs**. What you see on-screen is what you get on paper! Use the text mode with any 80-column printer, or the high-res graphics mode with the Epson, Gemini/Star, Okidata, Panasonic or Prowriter for **remarkably realistic forms**. BUT THAT'S JUST THE BEGINNING: Once you've designed a form, you can program **FORMS GENERATOR** to **make all calculations automatically**! Imagine: after you enter quantities, descriptions and prices, **FORMS GENERATOR** moves about the form calculating extended prices, subtotals, and even the sales tax! Like magic! (Sample invoices included). You can also use **FORMS GENERATOR** for record keeping, since you can save filled forms to disk!

Read what our customers have written: "Excellent easy to use and ran perfect (ly)..." T.W. Wethersfield, Connecticut; "I was most impressed with your FORMS GENERATOR program" J.E. King, South Carolina; "Love it!" C.R. Cortland, Ohio. Our "down to planet Earth" price: Only \$23.95 (product #ATA611).

ProCopy ST BACKUP UTILITY

You can't backup your software because copy protection locks you out. **ProCopy** is the key!

- Protects against the accidental loss of expensive software
- Works with all Atari STs
- Copies both S/S & D/S disks
- Use with 1 or 2 disk drives
- Not copy protected
- **FREE** shipping and handling
- **TOLL-FREE** telephone number
- Updates are only \$12 with return
- Orders shipped same day
- Disk analyze function included

Choose that option or type JOI (you only need the first three letters of a command) to add your User I.D. to Forum membership and activate all privileges. The sysop can also disable certain Forum features for non-members. If you try to access a disabled feature, the software tells you that you need to join and asks if you want to do so now.

MAIN MENU

The Main Functions menu is the first one most people see. Each of its seven choices branches off into a different area of the Forum. The new main menu looks like this:

Atari 8-bit Forum Functions Menu

- 1 INSTRUCTIONS
- 2 MESSAGES
- 3 LIBRARIES (Files)
- 4 CONFERENCING (# participating)
- 5 ANNOUNCEMENTS from sysop
- 6 MEMBER directory
- 7 OPTIONS for this forum

Enter choice !

Each department can be accessed by typing the appropriate number or the first three letters of the area's name. The new Forum software lets you choose to automatically enter the Forum at any menu. Therefore, the Main Functions menu does not necessarily have to be the first menu you see when entering the Forum. You set this within the OPTIONS category.

INSTRUCTIONS

Though the new Forum menus are very straightforward and easy to use, you really should read the instructions. As with all software, you are bound to find something that you missed before which might end up saving you time and money.

The Online Instructions area menu offers individual information on all the major areas of the forum, an online Help file and a copy of the Forum's reference card. You can also download the entire Forum User Guide. Instructions are available for:

- 1 Overview
- 2 Messages
- 3 Libraries
- 4 Conferencing
- 5 Announcements
- 6 Member directory
- 7 Options
- 8 Miscellaneous
- 9 Complete HELP facility
- 10 Forum Reference Card
- 11 Forum User's Guide

Enter choice !

When reading any online instructions, be sure to keep your capture buffer open so you can read the informa-

tion off-line and cut down on your connect charges. (8-Bit users should use the "capture to disk" feature of your terminal software.) I recommend the complete Help Facility and Forum User's Guide.

MESSAGES

The Forum's Message Center is where members can find assistance and meet new people (who might live halfway around the world). CompuServe's redesign effort is most noticeable here. Cryptic commands such as RF have been replaced by more intuitive commands such as READ FORWARD which, like all commands, can be abbreviated to its first three letters (REA FOR).

Several new menu selections enhance message retrieving. You can enter the Message Center by choosing command 2 (above) or typing MES from the main Functions menu. The Messages menu looks like this:

Atari 8-bit Forum Messages Menu

Message age selection = [New]

- 1 SELECT (Read by section and subject)
- 2 READ or search messages
- 3 CHANGE age selection
- 4 COMPOSE a message

Enter choice !

The first three choices deal with retrieving messages. Choice 4, or COM, lets you compose your own message to post on the Forum's message board using one of the two message editors available—LINEDIT (a line-oriented editor, much like those available on local bulletin boards) or EDIT (a powerful File Generator and Editor, formerly called FILGE).

Forum message boards tend to become very large, and message numbers get up to five or six digits. Now you can specify how far back you want to retrieve messages in terms of *days* instead of message numbers—no more guessing which message number was the first one posted three days ago. To do this, just change your age selection. The default age is set to retrieve new messages since your last log-in to the Forum. The age selection can be changed by choosing command 3 (above) or typing CHA at the Messages menu command prompt. The Change age selection menu looks this way:

Atari 8-Bit Forum Change Menu

- 1 [*] NEW messages
- 2 [] ALL messages
- 3 [] STARTING message number
- 4 [] Number of DAYS

Enter choice !

Your current setting is the one with the asterisk [*]. If you want to read only the last three days of messages, choose command 4 and respond to the "# of days:"

prompt with 3—or type DAYS 3 at the change menu command prompt.

The message number and age aren't the only retrieval criteria you can specify. You can also select messages by individual message number, message subtopics, or message subjects. By choosing command 2 or typing SEL from the message menu, you can select a second retrieval criteria.

Next menu is Forum Sections, which offers different choices depending on the specific Forum you're in and your retrieval age selection. This menu will show a list of subtopics containing messages pertinent to your age selection. Next to each subtopic are the number of subjects (threads) and the number of actual messages in the subtopic that meet your age selection. Here's an example:

Atari 8-bit Forum Sections Menu

Section names (#subs/# msgs)

- 1 Games/Entertainment (2/5)
- 2 Telecommunications (7/20)
- 4 Sound & Graphics (1/1)
- 5 Applications (3/10)

Enter Choice(s) or ALL !

From this menu you can choose to read from one, some or all subtopics. Multiple subtopics are separated by commas, so if you want to select only Telecommunications and Applications messages, you'd type 2,5 at the Enter Choice(s) or ALL ! prompt.

Next, the Forum Subjects menu lists all subjects and the number of messages displayed. From here you can again choose to read one, some or all subjects in that subtopic. You'll see a Forum Subjects menu for each subtopic you choose to read from the Forum Subtopics menu. Here's an example:

Atari 8-bit Forum Subjects Menu

Subject (# msgs)

Section 2—Telecommunications

- 1 When MPP EXPRESS 3.0 (2)
- 2 Viewing RLE Pics (3)
- 3 New Forum Menu Q's (4)
- 4 New term software (2)
- 5 Using ATARI8 (5)
- 6 New BBS (1)
- 7 ANTIC ONLINE (3)

Enter choice(s) or ALL !

All the submenus resulting from the SELECT command aren't nearly as complex as they seem. The online Instruction Guide gives you more in-depth information.

But how about experienced users who want access to the "classic" CompuServe reading commands. By select-

ing choice 2 or typing READ from the Forum Message menu you'll get the following:

Atari 8-bit Forum Read Menu

Read

- 1 [NEW] messages
- 2 Message NUMBER
- 3 WAITING messages for you (0)
 - Search [NEW] messages
- 4 FROM (Sender)
- 5 SUBJECT
- 6 TO (Recipient)

Enter choice !

The Read menu lets you read an individual message selected by its number, read *all* messages based on your age selection, do Read Searches, or read any waiting messages addressed specifically to your User I.D. Read Search seeks messages by the sender's (or receiver's) name or User I.D., or the subject.

Eventually you'll be able to bypass many menus by *chaining* commands—for example, typing REA DAY 8 FRO:SCHOENBACH at the main Functions menu will search the last eight days' worth of messages from anyone named Schoenbach. CompuServe's online documentation explains command chaining in more detail.

LIBRARIES

Data Libraries in a CompuServe Forum contain user and sysop-submitted programs and text files for you to download. CompuServe currently supports the following file transfer protocols: XMODEM (MODEM7), CompuServe A, CompuServe B, DC4/DC2 CAPTURE, Kermit, and CompuServe Quick B.

To enter the Forum's Data Libraries, type 3 or LIB at the Main Functions menu. At the next prompt, type the number of the Data library you selected. You'll then see the following menu:

Atari 8-bit Forum Library 7

- News & Reviews -
- 1 BROWSE thru files
- 2 DIRECTORY of files
- 3 UPLOAD a new file
- 4 DOWNLOAD a File
- 5 LIBRARIES

Enter choice !

Command 1 (BRO) puts you in Browse mode—the system goes through the Data Library files, from most to least recent, showing a complete description of the file followed by the option to download it or move on to the next one. Before Browsing, you'll be asked whether you

MASTERING COMPU SERVE'S NEW COMMAND SYSTEM

continued from page 15

want to search only files containing certain "keywords." If so, the system will find *only* the type of files you're looking for. Command 2 (DIR) simply lists a directory of files for that Data Library.

Use command 3 (UPL) to submit a file to the Data Library. There are *no* CompuServe connect charges for upload time. Use command 4 (DOW) to download a file from the Data Library. And command 5 (LIB) lets you change Data Libraries.

If you know the number of the Data Library you want to access, you can simply type LIB followed by the Data Library number at the Main Functions or Library menu. For example, typing "LIB 7" puts you directly into Data Library 7.

CONFERENCE

The Conference area is the basically the Forum's "lounge" where you can communicate electronically with other users in real time. Often the sysops invite a special guest, such as Bill Wilkinson of OSS, Leonard Tramiel of Atari Corp., Tom Harker of ICD, Express! programmer Keith Ledbetter, or spokespersons from **Antic**, Virtusonics and Datasoft.

On the other hand, impromptu conferences as well as regularly scheduled gab sessions are also very popular. Every Sunday at 9 p.m. EST, members from all over the United States gather in the Atari 8-Bit Forum (type GO ATARI8) to talk about any number of topics.

The Conference area takes a little getting used to, but many online Help files are available. I recommend HOW2CO.HLP and NEWCO.TXT in Data Library 2 (LIB 2) of the Atari 8-Bit Forum. You also should consult the Conference documentation in the Instructions area of the Forum.

ANNOUNCEMENTS

Each Forum contains eight announcement (bulletin) files with important, timely information about the Forum. Some announcements are automatically displayed whenever the sysop updates them, and others can be read only if you enter the Announcements area of the Forum and choose to read them. Choosing command 5 (ANN) at the Main Functions menu presents something like the following:

Atari 8-bit Forum Announcements Menu

- 1 News Flash
- 2 General
- 3 Messages
- 4 Conference
- 5 Library
- 6 Membership
- 7 Sysop Roster
- 8 New Member

Enter choice !

The News Flash Announcement is displayed automati-

cally to members entering the Forum if they haven't seen it yet. This Announcement is kept brief, often directing you toward other, more detailed Announcement files. The General Announcement, for instance, often elaborates on the News Flash Announcement.

The Messages Announcement contains information on any Hot Topics discussed on the Forum's message board.

The Conference Announcement is automatically displayed to members entering the Conference area who haven't seen the latest update. This Announcement informs you of any upcoming conferences and provides tips for using the Conference facility.

The Library Announcement often highlights some of the most recent uploads to the Forum's Data Libraries. It also contains tips on uploading and searching the Libraries for interesting files.

The Membership Announcement includes the purpose of the Forum. Pertinent operating rules are also listed here.

The Sysop Roster lists the names, interests, and the User I.D.s of the Forum Managers.

The New Member Announcement of important Forum information is displayed automatically when you join the Forum.

MEMBER DIRECTORY

The Membership Directory is one of the best places to meet new people who share your interests. Choosing command 6 (MEM) at the Main Functions menu presents:

Atari 8-Bit Forum Member Directory Menu

your current entry

- 1 ADD/modify
- 2 LIST
- 3 DELETE
- Search by
- 4 USER I.D.
- 5 NAME
- 6 INTEREST

Enter choice !

The first three choices pertain to your own membership directory entry. If you haven't filled one out, choose command 1 (ADD) at the prompt. Command 2 (LIS) lets you list out your entry to be sure it's accurate. And command 3 (DEL) lets you delete your membership directory entry.

The last three choices are for searching the membership directory by User I.D., name or interests. Once you find the names and User I.D.'s of people you'd like to know, be sure to drop them a "Hello" note through EasyPlex mail or in the Forum.

OPTIONS

The last major area of the Forum is Options, where you can tailor the Forum to your needs. This includes setting a different prompt character, turning menus on or off and

STOP THE PRESSES!

NEWSROOM ARRIVES FOR 8-BIT ATARI!

Antic write-in campaign pays off

Reviewed by Jim Pierson-Perry

Newsroom (\$49.95) is an easy-to-use page design application that puts the basic power of the press into your hands. You can quickly and easily create personalized newsletters, flyers and other short publications. This software is all you need for writing articles, adding pictures and designing the overall page layout.

As long-time 48K Atari 800 owner, I started reviewing the 64K **Newsroom** on a borrowed XE model. My family and I liked **Newsroom** so much that we bought an Atari 65XE computer just to continue using this program.

In May 1987, **Antic** kicked off a write-in campaign to convince Springboard Software to make an 8-bit Atari conversion of its popular **Newsroom** home publishing program. Two months and hundreds of letters later, Springboard president John Paulson gave the go-ahead. The Atari **Newsroom** was released in March, 1988.

SETTING UP

Newsroom requires an Atari XL/XE with at least 64K memory, an Atari 1050 disk drive (or a compatible drive

*Jim Pierson-Perry recently co-wrote an article in **Clinical Chemistry** titled "Automated Assay of Effective Heparin Activity in Plasma." He also programmed **Designer Labels** (**Antic**, April 1987) and last month's Super CZ MIDI application.*

that reads enhanced density disks) and a graphics-capable dot-matrix printer. Most likely you'll also need a printer interface such as ICD's P:R: Connection or the Atari 850, because the only direct-connect printer supported by the software is the Atari XMM801. However, the 64 printer drivers included in Newsroom should cover just about any standard printer.

Newsroom also requires Atari BASIC, so keep your finger off the [OPTION] button when loading the program. The Newsroom disks are copy-protected and formatted in enhanced density (DOS 2.5). Your data file disks must be formatted by the Newsroom program.

The Newsroom manual is clear and well-written, with numerous illustrations and screen shots. The provided tutorial gives step-by-step instruction in preparing a sample one-page newsletter.

Newsroom comes with more than 600 pieces of clip art. Three more \$29.95 clip art disks are available, providing an additional 2,000 general, business and sports/recreation images. Springboard discounts the entire product line if you order directly from them — \$39.95 for Newsroom and an extra \$9.95 for each clip art collection.

PANEL DISCUSSION

Newsroom publications are designed and printed one page at a time. A page is made up of individual panels (see *Figure 1*) that can each contain pictures and/or text. Standard 8 1/2 x 11 inch paper can hold eight panels, or six panels with a double-panel banner across the top of the page. Longer (14-inch) legal paper adds an extra two panels to the bottom of the page.

Each panel and banner is stored on disk as a separate data file. An additional page layout file controls panel posi-

Figure 1

tioning. All files for a given page should be kept on the same data disk.

The Newsroom main menu leads to five simulated departments—Photo Lab, Copy Desk, Banners, Layout and Press. The natural flow is to create pictures in the Photo Lab, then add text to form individual panels in Copy Desk. A banner, if needed for the page, is composed in Banners. You set the overall page format in Layout by deciding what panels to use and in what order. Then you print the page in Press.

Throughout the program, commands are selected by using either a joystick or the keyboard control arrows to pick from a menu of icons. This system is easy and intuitive. An undo command, appropriately called Oops, can be called from the Photo Lab, Banners or Copy Desk to cancel the most recent action.

DAISY-DOT II

Roy Goldman
2440 South Jasmine
Denver, CO 80222
(303) 756-6678
\$10, 48K disk

Reviewed by Charles Cherry

Most Atari owners are aware of Daisy-Dot, a program that prints text in a variety of excellent near letter-quality fonts on Epson and Star printers. Daisy-Dot took the Atari world by storm last year because it works so well and is public domain.

Now welcome Daisy-Dot II. It's more than just an upgrade, it's a whole new package. It makes desktop publishing a reality for the Atari. While News Station and Newsroom work as page layout programs, Daisy-Dot II makes it easy to "typeset" an entire manuscript. To prove this, the excellent, 25 page, manual is included on the disk as a Daisy-Dot II file. Just print it out.

The manual demonstrates multiple fonts (even on the same line), microspaced justification, block left, block right, centering, proportional tabs (for microspaced tables), bold

TOP BANNER!

Type-In Software 

**Ultimate banner maker
even uses Print Shop fonts**

**By Jacob Donham
and
Lee Brilliant, M.D.**

**Top Banner is a banner
printing program that's
loaded with features but
easy to handle. It can
even use fonts from
Broderbund's Print Shop
software as well as stan-
dard Atari 8 × 8 fonts.
This BASIC program
works on 8-bit Atari com-
puters with 48K memory
and disk drive.**

Top Banner easily produces a tremendous variety of horizontal banners or vertical streamers on just about any Epson-compatible dot-matrix or letter quality printer. You can control the height (up to eight inches) and width of each individual letter, as well as choosing the character that each letter is to be printed with. You can even use fonts from Broderbund's Print Shop software as well as standard 8×8 Atari fonts.

GETTING STARTED

Type in Listing 1, TBANNER.BAS, check it with TYPO II and SAVE a copy to disk before you RUN it.

Control the pointer on any menu with the up and down [ARROW] keys. You don't need to hold down the [CONTROL] key. Press [RETURN] to select an item or [ESC] to go to the previous menu.

The main menu choices are as follows:

EDIT MESSAGE takes you to an editing window so you can type the text of the banner. You can re-edit a message without retyping the whole thing. To erase the whole message, go to Edit and press [RETURN] without moving the cursor. NOTE: Trying to shift from a standard 8×8 font to a special Print Shop font will erase your message.

CHANGE PARAMETERS brings up another menu where you can change INDIVIDUAL or OVERALL parameters, or use EFFECTS. Selecting INDIVIDUAL takes you to a window where you move the cursor with the left and right [ARROW] keys. Press [RETURN] to enter your changes in foreground, background, height and width of each character. The foreground and background values are the ASCII codes that will be sent to your printer. The numbers that

(Talk about an embarrassment of riches! *Antic* hasn't printed a banner-making program since the highly popular Bannertizer (December 1984) because we didn't get another submission that did the job better. But now we suddenly had two!

From Jacob Donham, author of the ambitious MegAnimator in the February 1988 *Antic*, we accepted a powerful banner program controlled via easy-to-use pull-down menu windows. Then a few weeks later, well-known 8-bit programmer Lee Brilliant sent in his own banner program that did just about everything Donham's program did—plus accepting Print Shop fonts. When we asked Dr. Brilliant if we could add his Print Shop module to Donham's program, he generously offered to combine the best of both programs.—ANTIC ED)

determine the height and width of each "printed pixel" must be between 1 and 10. OVERALL lets you change the parameters of all the characters at once.

There are also four special effects:

RESPECTIVE FOREGROUND/BACKGROUND automatically sets each character to be printed equal to the ATAS-CII value of the overall letter. For example, if you had a banner that said "Hi", the "H" would be made up of little *H* characters, the "i" of *i* characters.

SHRINKING/GROWING makes the sizes of letters increase or decrease from left to right.

LOAD CHARACTER SET is where you enter the filename of the font you want. When you decide to print your banner, you'll be notified if you haven't yet typed a message or if your printer is disconnected. If an error message pops up, press any key to return to the main menu.

Each character has a different density when printed on paper. You can use this to your advantage. For instance, a letter made of periods will be much lighter than one made of asterisks. Interesting fade-ins and fade-outs can be produced by clever use of the foreground. You can also create small capitals by changing the heights and widths of some of the characters. Many of Top Banner's features work well together, while other combinations produce less-satisfactory results. By all means, experiment.

ABOUT THE PROGRAM

Top Banner uses quasi-pull-down menus. I did this the hard way, by PRINTing each menu separately. However, I'm working on a system that will create menus from DATA statements, requiring much less code.

Line 1010 lets you set up the program for your own printer. RESET\$ contains the printer reset command which re-initializes all printer settings to the power-up defaults. It also contains the commands setting the printer's line

feed length to 1/72 inches. MARGIN\$ contains the command to set the printer's left margin (see example in line 3050). SMALL\$ contains the command which sets the print pitch to 17 characters per inch.

PRINT SHOP FONTS

Top Banner is unusual because it uses not only standard 8×8 Atari fonts, but fonts that are compatible with Broderbund's Print Shop software as well. On Print Shop's menu screens, those nine fonts have names like Alexia or RSVP, but on the disk their filenames are simply F0 to F8.

Unlike DOS files, Print Shop fonts are only stored in contiguous sector blocks. So they can't be scattered all over the sector map like DOS files. If you want to modify a font using Print Shop Companion's font editor, you can only shrink it—you can't expand it. The Companion's fonts use the filename FO, plus the title and they also have different filename structures and file sizes.

The font directory starts on sector 362 and each directory entry occupies 32 bytes. (DOS directories start at sector 361, and filenames occupy only 16 bytes.) Bytes 17 and 18 of a Print Shop font filename contain the starting sector, while bytes 25 and 26 hold the file size.

Each file starts with four tables of 59 bytes, each byte corresponding to an ASCII character from 32 to 91—from space to Z. The @ is not used and has no values in the tables. The first table contains the width of each character in columns because Print Shop fonts are proportional, unlike fixed 8×8 fonts. The second table contains the height in rows, and the last two tables contain the address in RAM where each character's shape starts as it is loaded.

The characters in the Print Shop memory map start in RAM at \$60EC (24812 decimal). The rest of the file contains the font data itself. Companion files have an ad-

EASY 3-D WIRE FRAMES

Spinning the shapes of your imagination

JUST DRAW A SHAPE WITH YOUR JOYSTICK AND EASY 3-D WIRE FRAMES SPINS THAT SHAPE INTO A COMPLETE THREE-DIMENSIONAL WIRE FRAME GRAPHIC. THIS BASIC PROGRAM WORKS ON ALL 8-BIT ATARI COMPUTERS WITH AT LEAST 48K, DISK OR CASSETTE.

BY ROBERT GEDDINGS *Type-In Software* 

Before

After

A BLUEPRINT OF A HOUSE is a typical “wire-frame” graphic—a drawing composed entirely of lines, instead of a realistic “solid model” drawing of a house with everything colored or shaded.

Imagine being able to create three-dimensional wire frame graphics with no more effort than using a joystick to draw a single profile. That would be pretty nice, right? Well, you don’t need to strain your imagination. Easy 3-D Wire Frames gives you that ability right now.

With Easy 3-D Wire Frames, in a few minutes you can be designing an infinite variety of 3-D wire-frame spheres, cones, toruses, cubes, funnels and more. . . The number of different objects you can design is limited only by your imagination.

This program is an easy-to-use graphics system for creating realistic 3-D wire frame images. With Easy 3-D Wire Frames, you simply create an object’s “profile” (one of its sides). The program “spins” the profile around a center line, creating the wire frame. Easy 3-D Wire Frames takes care of all the messy little details such as calculating all the data points, fitting the object to the screen and displaying it in three dimensions.

3-D TERMINOLOGY

Before starting to use the program, there are a few computer graphics concepts that you need to be familiar with.

Axis: Most computer users are familiar with the standard three-dimensional axis that has the X-Axis going left and right, the Y-Axis moving up and down and the Z-Axis giving the illusion of going forward and backward inside the screen.

Easy 3-D Wire Frames rotates this axis slightly in order to get a 3-D effect when viewing the image. The left/right X-Axis is unchanged, but the Z and Y Axis have been *reversed*. Now the Z-Axis is the up/down movement on the screen and the Y-Axis moves into and out of the viewing plane.

Translation: Moving an object along any axis is called a translation. Translating an object has no effect on how the object will appear, it is simply used to move the object to a different place on the screen. For instance, after you create an object, if it seems too high on the screen you can use translation to move it towards the center.

Yaw: The best way to explain what the next three terms mean is to compare them to something you do every day. So. . . Yaw is the horizontal movement made when you shake your head “No.” It is rotation around the Z-Axis.

Roll: When confused, you might tilt your head *di-*

agonally towards one side. This is roll. It is rotation about the Y-Axis.

Pitch: Shake your head up and down for “Yes.” This is pitch. You rotate the object about the X-Axis.

STEP BY STEP

Type in Listing 1, SPIN.BAS, check it with TYPO II and SAVE a copy before you RUN it.

Now let’s go through each step of the process for creating a wire frame graphic, explaining the successive prompts as they appear.

The first thing you will be asked is whether you want to start a new drawing or load an older one. If you select Load, you will be asked to type the filename of the drawing. Remember to add the drive number (such as D1:SPHERE.3D). The file will then be loaded and you will go directly to the viewing screen.

If you select New, you will be asked to enter the number of control points you want, up to a maximum of 30. Control points are the individual data elements that actually make up the image. The wire frame lines simply connect the control points together. Here you are being asked only for the number of control points making up *one* profile (side), not the entire wire frame. For practical purposes, a number between 10 and 20 is best.

Next you are asked the number of sides the wire frame will have. Although you can have as many as 30 sides, a number between 10 and 15 should be picked. The more control points and sides you select, the longer it will take to do the calculations and drawing on the screen.

The next prompt asks if you want to use the default view. Type Y to select the default or N to define your own. If you select “Yes” you will immediately go to the drawing area. If you select “No” you will be asked seven more questions.

You can accept the default values for any one of the following seven questions by pressing [RETURN] without entering new numbers.

Magnification: This tells the computer how big to make the drawing. The larger the magnification value, the larger the graphic.

MX, MY, MZ: These are the translation values I mentioned earlier. They are useful for centering the image on the screen.

Yaw, Roll, Pitch: These values are in degrees, so enter a number between 0 and 360.

After you answer all the above questions, either by en-

Pole Position, Joust, Moon Patrol and other greats!

Millipede

By Matthew Ratcliff

With Atari's release of the XE Game System, some outstanding new game cartridges have appeared and some terrific oldies have *reappeared*. Of course, all these entertainment cartridges work on *any* 8-bit Atari computer—800, XL or XE.

Newer Atarians may well have missed some of these classic Atari games the first time around, because the cartridges have not always been too easy to find. However, if you can't obtain these titles at a convenient local dealer, you can order them direct from Atari at invitingly low prices.

In this series, I'll take quick looks at some of Atari's all-time best cartridge games and rate them on a four-star system.

ROBOTRON

★★

The robots are kidnapping all your friends, and only *you* can save them! **Robotron** (\$19.95) is a good arcade translation, but it doesn't live up to its coin-op ancestor. Because the beasts you're blasting are "character"

graphics, the characters “jump” about on the screen, unlike the smooth animation of Player/Missile graphics. This makes it difficult to anticipate the movement of the bad-dies, so you get killed a lot. Of course, each level has more bad guys which are faster, weirder and tougher to nuke.

MOON PATROL

★★★★

This coin-op port has it all. Shoot the bad guys as you drive over the moon’s surface through 26 levels of difficulty. While driving, you can even jump your vehicle over craters and opponents. The neatest feature about **Moon Patrol** (\$19.95) is that you can *always* continue from one game to the next, so you can play as many games as necessary to get through all the levels for practice, before tackling the entire course in one game. All too many games make you start again from scratch. This one is a must for any gamer’s collection, with superbly detailed graphics and smooth scrolling backgrounds.

SPACE INVADERS

★★★★½

I bought an Atari because of this game. It’s impossible to “finish” **Space Invaders** (\$6.95)—you always die. You just blast away at the invaders until battle fatigue gets to your joystick wrist, and it’s all over. But the sound effects are. . . Wow! As the invaders get closer, faster, and *louder*, your pulse quickens with each trigger-press. Once you “land” the spaceship you get a neat effect and you continue from there, *ad infinitum*, until Space Invader Death creeps in. The major inconsistency in Space Invaders is that in the two-player mode, when one player dies, the next gets a turn. When the first player goes again, the *entire round* must be repeated. This doesn’t happen in one-player mode.

ASTEROIDS

★★★★

Late one night I “mastered” **Asteroids** (\$6.95). This coin-op conversion can handle up to four competing players at once (on a 400/800). Put simply: You nuke asteroids till you die. And in the “combat mode,” players can blast one another for fast (typically brief) games. You get an extra ship for every 10,000 points. And after scoring a quarter-million points with over 20 spare space ships, I was about done in. At 2 a.m. I had to decide to go for a full million points, or get a little sleep before work the next day.

The “glitch” in Asteroids is its Pause mode. You can press the [SPACEBAR] to pause play, but if the attract mode kicks in, you can’t continue. The pursuit of points in a video game loses all its glamour at this point, but Asteroids is still great, with good sound effects and decent graphics considering its 8K cartridge limitation.

POLE POSITION

★★★★★

Pole Position (\$19.95) is my favorite 8-bit game of all time. It’s true to the original coin-op, lacking only some voice synthesis and billboard advertisements. Playability, graphics and sound effects are all superb. You must weave in and out of a pack of cars to qualify for the big race,

passing at least one along the way. If you pass them all, you can get Pole Position. From there, the race is on.

Shifting from low to high gear, at around 90 mph, you are racing at simulated speeds of up to 193 mph. The fire button is your brake pedal, but I prefer to hit the median to slow down and get some bite to take some of the sharper turns. Your viewpoint is slightly behind and above the car, maneuvering in an increasingly tighter pack of cars for four laps. You are given a maximum time to complete each lap. Run out of time before completing a lap and the race is over.

Your final score is based upon total cars passed and extra time remaining at the end of the run. The real challenge is to complete a four-lap race with over 60,000 points and no crashes (you can generally afford two or three crashes during the course of one race). This game takes much more skill than luck, which is what keeps me coming back for more.

JUNGLE HUNT

★★★★

A funny thing happened on the way to your safari—you lost your girlfriend. Maybe Tarzan has stolen her? No, it’s worse! Cannibals have swiped her and you’re invited *as dinner*. In **Jungle Hunt** (\$19.95) you must swing through the vines, swim the crocodile-infested waters, climb mountains and finally outwit the cannibals to save your sweetie. This challenging game is reminiscent of Pit-fall, but more imaginative and quite playable, and you can actually finish the game. The graphics are very good, but the sound effects remind me of those you hear in old Intellivision games—which weren’t too hot.

DEFENDER

★★★★½

Defender (\$19.95) is a disappointing coin-op conversion for a couple of reasons. The graphics are rather slow, jerky and not very sharp, which makes it difficult to “anticipate” the moves of your foes. There aren’t enough buttons on your joystick, so Atari placed the Smart Bomb on the keyboard’s [SPACEBAR]. The only time you will use the Smart Bomb is to nuke a whole swarm of bad guys when the pressure is on. Under such pressure, players tend to pound the [SPACEBAR] as if they were hammering ten-penny nails into an oak 2 × 4. The result is damaged keyboards, *many* of them.

The revised version for the XEGS will probably use one of the console keys, which are flush with the computer case. If you *loved* the coin-op Defender and *must* have a version at home, this will do fine.

JOUST

★★★★★

Joust (\$19.95) for the 8-bit Atari is undoubtedly one of the finest arcade translations ever. This unique game is seldom imitated because of the sophistication required. Mounted on what looks like a flying ostrich (although it’s called a buzzard), you and an optional teammate fly against ever more deadly jousting birds and pterodactyls. If you collide with an opponent at the higher altitude, the bird

continued on page 40

SAY CHEESE

Artwork can be included in your publications as "photos" created in the Photo Lab by combining clip art, text and graphic enhancements. You can use 30 pieces of clip art in a single photo. However, *only* Springboard clip art can be used! There's no way to import art from other sources such as Print Shop icons or MicroPainter pictures.

(If you can develop a method to incorporate Print Shop icons or other graphics, as well as additional fonts, fills, etc. send it to Antic for possible publication.—ANTIC ED)

Clip art is stored on disk in families of two to eight related pictures. A directory of all artwork is given in the program manual. Manuals for the other volumes of clip art contain their own pictorial directories. After you choose a family name, the art is copied to the screen where you can select the desired piece and put it in your working area. Clip art can be moved around the work area and flipped across the Y-axis to give a mirror image. It cannot be scaled or rotated.

The graphics toolbox provides shapes, fill patterns, lines, circles and rectangles. Freehand drawing and erasing are supported along with 10 pre-defined pen shapes and 10 fill patterns. The zoom magnifies small areas of the panel on a pixel-by-pixel scale for fine tuning.

WRITE STUFF

After assembling the artwork and using the toolbox for any touch-up work, you're ready to "take a photo." A set of cursors appear which you can position to define the

area of the picture to be included in the photo. The photo is then saved to disk for use at the Copy Desk.

Text is added at the Copy Desk, one panel at a time. Three large fonts are available for headlines and two normal fonts are provided for the text itself. These normal fonts are scaled-down versions of large fonts, not new styles. All five fonts are easily readable. No capabilities are provided for creating new fonts, importing any of the hundreds of existing screen fonts in the public domain or changing font size.

Each panel can contain a photo, text or both. One large and one normal text font can be used in a panel, but not mixed on a single line. First a photo is positioned within a panel. As text is added, it flows across and down from the upper left, automatically wrapping around the photo. You can reposition the photo any time and the text will adapt to the new set-up.

continued on page 38

DAISY-DOT II

continued from page 19

own, and a utility package that converts Atari screen fonts into Daisy-Dot fonts and automatically creates italicized font versions. In case that isn't enough, on the back of the disk is the graphics printing program Billboard (reviewed in Antic, February 1988), which has been modified to print pictures to the disk in files that can be merged into your Daisy-Dot document.

LIMITATIONS

Daisy-Dot II is decidedly not WYSIWYG—what you see isn't what you get. It takes a couple of steps to produce a finished manuscript. First, compose your text in your favorite word processor, then print it to disk. Load this disk file back into the word processor and do your formatting using Daisy-Dot II commands. Save this file; load Daisy-Dot II, and finally print the file. Since you never see the results on the screen, it may take a couple of tries to get it right. But you'll improve with experience.

The letters in the individual fonts cannot be taller than the printhead on your printer. This means that banner headlines and other large effects are out. Of course you can include large letters as pictures, but pictures cannot be mixed with text on the same line—unless you run the paper

through the printer a couple of times. Since all the printing (including text) is essentially a bit-mapped graphics dump, the program is slow and uses up ribbons.

Daisy-Dot II only works with Epson MX, FX, and Star compatible printers. It does not work with some very early Star Gemini-10X printers, but Daisy-Dot author Roy Goldman is working on the problem.

Nevertheless, the results are fabulous, far better than I'd have thought possible. As a final nice touch, Daisy-Dot II is well-behaved and will work with any DOS, meaning that you can use your high-speed drives and mega-RAMdisks. For instance, pairing it with TextPro and a large RAMdisk will speed up things wonderfully. You can instantly shuffle the programs back and forth in the RAMdisk. You can also load and save the text instantly and print from the RAMdisk (including fonts).

Daisy-Dot II is still public domain. You can get it free from your local user group, bulletin board, or a commercial online service like CompuServe or GEnie. You can also order it directly from the author. For \$10 (or more) he'll send you the double-sided disk with the documentation already printed out. Wherever you get it, if you like the program (and I can't imagine anyone not liking it), send the author some money. The only thing rarer than a program like this is a programmer like Roy Goldman—support him. ■

TYPING SPECIAL ATARI CHARACTERS28

HOW TO USE TYPO II29

DISK SUBSCRIBERS: Programs for 8-bit Atari computers can be used immediately. Just follow instructions in the accompanying magazine articles. ST Owners: See monthly disk's ST Help File for instructions on how to transfer programs to 3-1/2 inch disk.

DOS COMPATIBILITY: All 8-bit programs published by Antic are tested to work with Atari Disk Operating System (DOS) 2.0S and 2.5—not with the incompatible DOS 3.0. DOS 2.0S is available on each Antic Monthly Disk. Copy the DOS.SYS and DUP.SYS files.

No part of this publication may be reproduced, stored in a retrieval system, or transmitted, in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior written permission of the publisher.

TYPING SPECIAL ATARI CHARACTERS

Antic printed program listings leave a small space between each Atari Special Character for easier reading. Immediately below you will see the way **Antic** prints all the standard Atari letters and numbers, in upper and lower case, in normal and inverse video.

```

ABCDEF GHI JKLMNOPQRSTU VWXYZ
a b c d e f g h i j k l m n o p q r s t u v w x y z
0 1 2 3 4 5 6 7 8 9
  
```

The Atari Special Characters and the keys you must type in order to get them are shown in the two boxes below.

NORMAL VIDEO				INVERSE VIDEO			
FOR THIS	TYPE THIS	FOR THIS	TYPE THIS	FOR THIS	TYPE THIS	FOR THIS	TYPE THIS
CTRL ,		CTRL S		CTRL X		CTRL X	
CTRL A		CTRL T		CTRL Y		CTRL Y	
CTRL B		CTRL U		CTRL Z		CTRL Z	
CTRL C		CTRL V		ESC		SHIFT	
CTRL D		CTRL W		DELETE		DELETE	
CTRL E		CTRL X		ESC		SHIFT	
CTRL F		CTRL Y		INSERT		INSERT	
CTRL G		CTRL Z		ESC		CTRL	
CTRL H		ESC ESC		TAB		TAB	
CTRL I		ESC CTRL -		ESC		CTRL	
CTRL J		ESC CTRL =		TAB		TAB	
CTRL K		ESC CTRL +		.		.	
CTRL L		ESC CTRL *		;		;	
CTRL M		CTRL .		SHIFT =		SHIFT =	
CTRL N		CTRL ;		ESC CTRL 2		ESC CTRL 2	
CTRL O		SHIFT =		ESC		ESC	
CTRL P		ESC SHIFT		CTRL		CTRL	
CTRL Q		CLEAR		DELETE		DELETE	
CTRL R		ESC DELETE		ESC		ESC	
		ESC TAB		CTRL		CTRL	
				INSERT		INSERT	

Whenever the CONTROL key (CTRL on the 400/800) or SHIFT key is used, *hold it down* while you press the next key. Whenever the ESC key is pressed, *release* it before you type the next key.

Turn on inverse video by pressing the Reverse Video Mode Key . Turn it off by pressing it a second time. (On the 400/800, use the Atari Logo Key instead.)

Among the most common program typing mistakes are switching certain capital letters with their lower-case counterparts—you need to look especially carefully at P, X, O and 0 (zero).

Some of Atari Special Characters are not easy to tell apart from standard alpha-numeric characters. Usually the Special Characters will be boxed. Compare the two sets of characters below:

SPECIAL		STANDARD	
	CTRL F		/
	CTRL G		SHIFT +
	CTRL N		SHIFT -
	CTRL R		-
	CTRL S		+

HOW TO USE TYPO II (8-BIT)

TYPO II automatically proofreads **Antic's** type-in BASIC listings for 8-bit Atari computers. It finds the exact line where you made a program typing mistake.

Type in TYPO II and SAVE a copy to disk or cassette. Now type GOTO 32000. When you see the instruction on the screen, type in a single program line **without the two-letter TYPO II code** at the left of the line number. Press the [RETURN] key.

Your line will reappear at the bottom of the screen with a two-letter TYPO II code on the left. If this code is not exactly the same as the line code printed in the magazine, you mistyped something in that line.

To call back any line previously typed, type an asterisk [*] followed (without in-between spaces) by the line number, then press [RETURN]. When the complete line appears at the top of the screen, press [RETURN] again. This is also the way you use TYPO II to proofread itself.

To LIST your program, press [BREAK] and type LIST. To return to TYPO II, type GOTO 32000.

To remove TYPO II from your program, type LIST "D:FILENAME",0,31999 [RETURN] (Cassette owners LIST "C:"). Type NEW, then ENTER "D:FILENAME"[RETURN](Cassette—ENTER "C:"). Your program is now in memory without TYPO II and you can SAVE or LIST it to disk or cassette.

Don't type the
TYPO II Codes!

MASTERING COMPU SERVE'S NEW COMMAND SYSTEM

continued from page 17

setting the message editor you wish to use:

Atari 8-bit Forum Options Menu

- Forum Options
- 1 INITIAL menu/prompt [Forum]
- 2 Forum MODE [MENU*]
- Messages Options
- 3 PAUSE after messages [Always]
- 4 NAME [Mike Schoenbach]
- 5 Prompt CHARACTER []
- 6 EDITOR [EDIT*]
- 7 SECTIONS [...]
- 8 HIGH msg read [28822]
- 9 REPLIES info [List]
- 10 TYPE waiting msgs [OFF]
- 11 SKIP msgs you left [OFF]

Enter choice !

INITIAL—The Main Functions menu doesn't necessarily have to be the first area of the Forum you enter when logging in. Here is where you can change your entry default menu or Forum area to the Libraries, Conference center or Message area if you want.

Forum MODE—Every Forum has two modes of operation. Menu mode entitles you to full menus. For more experienced users, Command mode gives brief command

prompts instead. By typing GO PROFILE you can make a "global" setting for the entire system to default to Menu or Command mode when you join a Forum. An asterisk [*] shows the global setting in your current Forum mode.

PAUSE—You can set how often CompuServe prompts you for a command when reading messages. Settings include Always (read one message at a time, stopping after each one), To You (only stop after messages addressed to you) and Never (scroll mode). When CompuServe pauses after displaying a message, you can reply, reread, or read the replies to the message. If the message is either TO you or FROM you, you can also delete it.

NAME—You can change the name you use in the Forum. Please note that some Forums have this feature disabled, in which case you can ask the sysop to make the change for you.

CHARACTER—You can specify a prompt character. Whenever CompuServe displays a command prompt requesting your input, the character you specify using this option will be appended to the prompt. This is especially useful if you're using a script-driven modem program.

EDITOR—You can choose which editor you prefer to use when leaving messages—the line-numbered LINEDIT, or the non-line numbered EDIT.

SECTIONS—The Sections option lets you select which message sections you want to read. This will help you bypass messages of no interest to you.

HIGH—High Message Read lets you enter a new value for the highest message you've read in the Forum. You

PRINTPOWER
Hi-Tech Creations, Inc.
 1700 N.W. 65th Avenue, Suite 9
 Plantation, FL 33313
 (305) 584-6386.
 \$14.95, 48K disk

Reviewed by Jim Pierson-Perry

The second generation of home printing software is here. **PrintPower** lets you create the same types of artwork as Broderbund's **Print Shop**, but offers many more options for layout and style.

This unprotected two-disk program requires minimum 48K memory, an Atari 1050 disk drive or a compatible drive that can use enhanced density disks (as many as eight drives are supported). The software includes 22 printer drivers for standard dot-matrix graphics printers which will require an interface such as the ICD P:R: Connection.

You can create cards, signs, stationery and banners. All except banners can be printed using either horizontal or vertical orientation. Tent cards are a new layout, made by folding a piece of paper vertically in half and standing it on the edges. Signs and stationery can be printed in full-page or half-page sizes. Banners can have multiple text lines, each with a different font size, and occupy as many as 42 pages.

All artwork can include a border and one graphic design per layout page. This means you can have graphics and text on all faces of a card. The graphic can be copied and pasted at will over the layout page using the arrow keys for freehand positioning. Five graphic sizes can be used, ranging from one inch to full page. Borders, if included, can be one inch or a half inch wide.

All text, regardless of artwork type, is entered via a common editor. Seven fonts are included, ranging from old English to modern. Three different fonts can be mixed on a layout page. Banners can use 11 text sizes while all other

artwork uses only three. Text can be justified left or right, or centered. Special text effects include bold, italics, outline, shadow, 3-D and shadow italics. A masking option selects whether the text will overwrite or be hidden by background graphics.

Progress throughout the design process is shown by a template on the upper half of the screen display. Blocks and lines are used to show layout, rather than the actual text and graphics, which saves on time and memory consumption. The screen displays are primitive but functional. While printing, a lot of garbage appears on the screen: ignore it. The printout is just fine and the screen eventually comes back to normal.

Despite the new artwork features, success of this program will depend partly on increasing the number of available graphics. The program comes with a starter library of 60 graphics and 20 borders. Additional graphics disks in Hi-Tech's AwardWare series can be directly converted for use with **PrintPower**. Further graphics, font and border disks are also planned. I would like to see a graphic editor available for users to make their own pictures. This is the only significant feature of **Print Shop** not met or equalled by **PrintPower**.

Those who have frustrated by the limitations of earlier home printing programs ought to take a look at **PrintPower**. I am impressed by its features and performance, especially considering its low \$14.95 price. I give **PrintPower** a "best buy" recommendation. ■

STOP THE PRESSES: NEWSROOM ARRIVES FOR 8-BIT ATARI *continued from page 26*

When editing text, you can delete, copy, or move a text block, delete characters, or delete all. Panels can be saved to disk and recalled for later editing.

Banners are put together similarly to a single panel. Art can be added from clip art and/or the graphics toolbox. Once a banner is made, it can be saved and used repeatedly with any small editing changes that are needed (such as the date).

PRESSING ENGAGEMENT

After all the individual panels are done, the final page format is set in Layout. You specify either standard or legal page size, format with or without banner, select panels and their positions on the paper. This is saved to disk as a separate page layout file and then you're ready to roll.

Printing is done in the Press Department. On your first visit, you must select the appropriate printer driver. Several test routines can be used to make sure your printer

responds properly to the program. When the configuration is set, select Print Page to get your printout.

A typical page takes seven or eight minutes to print. Only one page can be printed at a time. I'd have preferred to be able to make multiple copies. You can also print individual banners, panels or photos rather than an entire page.

Newsroom is a welcome addition to the ranks of useful, high-quality Atari 8-bit software. It was well worth the effort needed to get it for our computers. ■

MASTERING COMPUERVE'S NEW COMMAND SYSTEM

continued from page 37

can enter the new value, L for last, or press the [RETURN] key for no change.

REPLIES—Before reading the replies to a message, you can choose to see the message numbers of all replies with the LIST selection, a specified number with the COUNT selection, or no replies at all with the NONE selection.

TYPE—With this option ON, all of your waiting messages are shown in full text when you enter the forum. With it OFF, only the heading of waiting messages is displayed. The REA WAI (READ WAITING) command at the Main Functions menu lets you retrieve the full text of waiting messages.

SKIP—This option lets you avoid reading messages that you posted yourself.

OLD FORUM SOFTWARE

CompuServe will offer the old Forum software for one year after the release of the new version. They encourage you to learn the new menu and command system at your own convenience *offline* by reading the information they'll send you in the mail. To continue using the old Forum software, type in your User I.D. as follows when logging on:

User I.D.: 76703,4363;OLDF

CompuServe will support as many of the old Forum commands as possible to help you during your transition.

TOP BANNER!

continued from page 21

ditional 12-byte header at the beginning containing, among other things, the index line settings for the editor.

The largest that a Print Shop font character can be is 48 columns by 38 rows (228 bytes). So 58 characters at 228 bytes apiece comes out to 13,224 bytes. Unfortunately, there's not enough free RAM, and font length is limited to only 11K. Luckily, even the largest existing fonts occupy only a few kilobytes. Therefore you should be able to use the Print Shop Editor to create two fonts and link them into one long file. One font will have upper case and the other adds lower case and graphics. Print Shop can't recognize the extra material, but Top Banner can.

Atari 8×8 fonts are only 1K each and are compatible with the standard Atari character set. They can be created with editor programs such as UltraFont (**Antic**, August 1986). These fonts need a .FNT extender to be accepted by Top Banner.

ADVANCED TECHNIQUES

When you use "Change Overall Parameters," only enough members of the storage array are changed to accommodate the length of the message. If you re-edit and lengthen the message, you must re-do the Change routine.

Be careful when using Respective Foreground and Background with characters other than standard ASCII. While your computer understands ATASCII, your printer doesn't

The following commands will *not* be supported by the new software:

Functions Menu—B, R, RTONLY, S, STONLY, STDISONL, STONLDIS, QSALL, QSONLY

Read Actions Prompt: UA, SM, C

Post Menu: C, P, L, R, I, D, RA

For more information about the new Forum software, call CompuServe Customer Service at (800) 848-8990 or send an online FEEDBACK (type GO FEEDBACK at any system prompt). Connect time spent in the FEEDBACK area is free of charge. And, of course, always feel free to leave a message addressed to a sysop in your favorite CompuServe Forum with any questions you have about the new software. ■

*Mike Schoenbach is one of the sysops on CompuServe's SIG*Atari.*

NEW: BBS COVERAGE COMING TO ANTIC

In response to many requests from readers, **Antic** plans to start publishing detailed descriptions of outstanding Atari bulletin boards this autumn. Do you know about or operate a strong Atari-oriented BBS that bars software piracy? Write **Antic** a brief letter about it, or upload a message on ANTIC ONLINE.

—a CHR\$(12) would not be a small square but a multi-page form feed.

While 8×8 fonts are fixed in size, Print Shop fonts vary from font to font—and between characters within a font. When printing Print Shop fonts, the height (or width in vertical mode) will be scaled down to fit the page according to the largest character in the set. Otherwise a size 10 Balloon character would be about three pages wide.

Top Banner runs much faster than Print Shop, even when using the same fonts. That's because Top Banner has a different approach to printing. Print Shop first maps each letter into RAM, then converts it to graphics data to send to the printer. But Top Banner simply prints dots as solid rectangular *text*, instead of solid rectangular *graphics* like Print Shop.

A whole line of text occupies only 80 bytes (at 10 characters per inch), but a whole line of graphics could consume up to 2,000 bytes. Furthermore, printing graphics is *much* slower than printing text. So Top Banner represents each pixel in a column by either "blank" strings or as "pixel" strings which are then linked to form a print line. Banner height is altered by changing the length of these two strings, while width is controlled by how many times you print the line.

The slowest part is the logic required to print the letters sideways, so to speed things up these subroutines are located between at lines 100-400. ■

Listing on page 32

EASY 3-D WIRE FRAMES

continued from page 23

tering a new value or accepting the default, the program goes to the drawing screen. The drawing area is a Graphics 8 box above a text window.

You'll see a vertical line down the center of the drawing area. That line is what your profile will be spun around to create the wire frame.

The cursor does not destroy a line by going over it. In the text window along the bottom of the screen is a status line displaying the control point you are working on and your current X and Y values.

The drawing screen uses standard Cartesian coordinates, which are much better suited to 3-D graphics than the Atari's coordinate system. (See *Figure 1*.)

To select a control point location, use the joystick to move your cursor to the chosen position and press the joystick button. When designing the profile, it may help you to think of the Y value as the *depth* of the object you are creating and the X value as the *radius*.

FIGURE 1

After you have selected all your control points, the program starts calculating the wire frame data. This may take awhile, depending on the number of control points and sides you selected. For a graph with 10 control points and 10 sides, the program must calculate 100 data points, using several loops and a lot of SIN() and COS().

After the data has been calculated, the program will draw the image on the screen. At this point two things can happen: 1. Drawing the object will be completed and you'll have your first Easy 3-D Wire Frames graphic. 2. You will see the message "Fitting To Screen." This means the object you created is too big to be displayed completely onscreen, so the program is scaling it down for you.

After displaying the graph, another prompt appears in the text window: View, New, Print, Save, Quit. Type the first letter of the function you want and press [RETURN].

View: This option lets you edit the values that you entered earlier—Magnification, MX, MY, MZ, Yaw, Roll and Pitch. Like the main menu, it tells you what the current value is. Press [RETURN] to keep this value, or type in a new one.

New: This re-starts the program.

Print: This option presents you with yet another menu. You can select "Data," which prints a table of all the values used to create the wire-frame. If you have an Atari 1020

Plotter attached, you can select "Graph." This gives you a very nice printout of the wire frame drawing. I purposely made the Graph routine the last section in the program, so that those without a 1020 Plotter can substitute their favorite printing graph routine here.

Save: This stores your wire frame on disk. You can save it as a data file, a Micro-Painter compatible picture file, or both. If you want to be able to reload your wire frame, be sure to save it as a data file.

When you choose the Save function, you'll first be prompted for a filename for the data file. Remember to include the drive number as part of the filename (example, D1:SPHERE.3D). If you don't want to save the wire frame as a data file, just press [RETURN].

Next you'll be prompted for a filename for the picture file. Type a filename, as before. Again, if you don't want to save the wire frame as a picture file, just press [RETURN].

Easy 3-D Wire Frames saves images as 62-sector Micro-Painter files. These *can't* be reloaded into Easy 3-D Wire Frames, but may be used with many painting and animation programs. *Rapid Graphics Converter* (Antic, November 1985) enables you to use these pictures with even more kinds of graphics software.

Quit: Quits. ■

Robert Geddings of Eugene, Oregon published PolyMove in the August 1987 Antic. Listing on page 35

CLASSIC CARTRIDGES REVISITED

continued from page 25

and its rider get zapped. The bird becomes so upset that she lays an egg, which yields more points if you retrieve it promptly. If you wait too long, another joustier is hatched, making life more difficult.

This game replicates the look, sound and feel of the arcade original. If you fly too close to the lava pits, a mysterious hand will grab at you. At various difficulty levels the rock formations upon which you can land vary. As the game progresses through survival (complete a round without dying) and "pterry" waves, your opponents become faster and smarter, too.

An additional life is awarded every 20,000 points. All the opposing birds, seemingly dozens at once, move fluidly. The animation is superb, with only an occasional "flicker" when the screen is particularly full. With two players jousting simultaneously, you will find this a great game to play with a friend (or against, since you can joust each other as well).

CENTIPEDE

★ ★ ½

Your mushroom garden has been invaded by centipedes which weave their way through the mushroom patch hoping to eat you for lunch. To complicate matters, dancing spiders are interested in ruining your day as well. Top that off with annoying little kamikaze creatures trying to squash you while you're planting more mushrooms to provide additional "cover" from the centipedes, and you're

going to have one tough day. As **Centipede** (\$16.95) progresses you have more centipedes to zap, intruding scorpions, and other zany critters out to ruin your garden. This is a successful coin-op conversion. I was never too keen on the original, but if you were then I can recommend this one.

MILLIPEDE

★★★½

Millipede (\$19.95), the sequel to **Centipede**, was much more popular in the arcades because of its improved sound effects and playability. Besides shooting the millipedes and jumping spiders, you must deal with swarms of interesting bees, dragonflies and mosquitos. Since you've learned from past gardening experiences, you now have DDT bombs in your garden. Whenever a millipede or some other dastardly insect gets too close, shoot the DDT bomb and take it out. New creepy crawlers include inchworms, beetles and earwigs. It takes a real green thumb, with lightning reflexes on the fire button, for this garden to survive.

Next month we'll take a look at a few more Atari cartridge classics. As these oldies-but-goodies are rereleased by Atari, we'll keep you informed. ■

TEXT SCREEN CODEMAKER

Converts word displays into program lines

Text Screen Codemaker is a quick, easy tool for adding screens of text to your programs, especially help screens for applications with lots of commands.

This BASIC program works with 8-bit Atari computers of any memory size, disk or cassette.

BY JOHN BERNDT

Type-In Software 

TEXT SCREEN CODEMAKER is a useful utility that converts onscreen text into actual source code that can be included in your BASIC programs. Using the Text Screen Codemaker is so simple that I find myself writing every menu, introduction screen and prompt with it.

Type in Listing 1, CODEMAKE.BAS, check it with TYPO II and SAVE a copy before you RUN it. The pause when you RUN the program is due to the Player/Missile cursor being initialized.

John Berndt is a high school student from Rochester, New York. He has been an Atari programmer since 1983 and participates in his local users group, ACORN.

The opening prompt asks for the first line of your program. The Screen Formatter begins with line 20000, so any number below that is fine. Then you're asked for the line increment—any increment works unless it will eventually interfere with the Text Screen Codemaker.

At the Left Margin prompt, enter the column number where you want printing to begin on your screen. The default is 2, because many television screens cut off the first couple of columns. Now press [START] to begin creating your screens.

The [CLEAR], [INSERT], [DELETE], [ARROW] keys, etc., function as normally. For large jumps across the screen, use the [ARROW] keys because this eliminates most of the problems caused by the computer keeping track of all the logical lines. *Don't* press [RETURN] until you are done!

Also, *don't* type on the last line at the bottom of the screen—or on the last space in the second to last line. This will make the screen scroll upward and eliminate the top line. Press [RETURN] and let the Codemaker do its stuff only *after* you're satisfied that everything is the way you want it.

During the first pass of the cursor, ATASCII character 253 (the crooked left arrow made by pressing [ESCAPE] and then [CONTROL] [2]) is added to mark the end of each line for later use. All the onscreen characters are stored in memory during the cursor's next pass.

Next, the computer counts the spaces before each line begins. The source lines are then written and stored in memory. After everything is finished, the new lines are displayed, and you are asked if you want to SAVE them. If so, enter a filename at the next prompt. You can LIST the lines to any device, including a cassette (by entering C:) or printer (by entering P:). To SAVE them to disk, enter D: and a filename.

TECHNICAL NOTES

I discovered that Text Screen Codemaker needed a special cursor because the normal cursor left a trace character onscreen that was picked up in the final source code. Jerry White's P/M Cursor routine (*Antic*, November 1984) provided a fine solution. I stripped White's previously full-featured program into the bare DATA stamps and an initialization routine for the machine language (lines 20025-20035).

Lines 20255-20320 are the logic of the Codemaker program. They check to see whether there are more than six spaces before the actual line begins, in which case a POSITION statement would be more practical. Another case where a POSITION statement would be added is if one or more lines are skipped between two lines. Line 20170 prevents the skipped line that would be caused by placing the character 253 in the last column.

I used several programming tricks in Text Screen Codemaker. The POKE 84,4 replaces a standard POSITION statement by POKEing a number into the computer's memory location for the current row, thereby skipping the appropriate number of lines.

POKE 842,13 activates the Atari's Forced Read mode, which makes the computer "press" [RETURN] automatically. This can be handy by previously positioning the cursor above a line you wish to enter into memory and then doing the POKE. POKE 842,12 turns this feature off.

I created an all-purpose error-handling routine (lines 20425-20435) to replace dozens of TRAP statements. Location 195 holds the most recent error number. The subroutine always has to be re-initialized when it is used. Line 20435 returns the program to the line before the error. ■

Product Reviews

Clash: Ethereal, Star NR-10

CLASH: ETHEREAL

In the mood for a quick trip to Hades? No, I'm not venturing into the travel agent business. Rather, I'm describing a game in which you'll battle Satan himself in a fight to save your soul. In **Clash: Ethereal** there are magic stones to find, clues to gather, traps to avoid and fully animated foes to battle. There are five different dungeons, making up 95 distinct screens. But to win, you must solve 13 riddles.

You won't solve them all in one sitting, but it is possible to save the game at any of several points. The graphics are adequate, but not prize-winning. Movement can be accomplished via the keyboard (with or without a joystick). Overall, the challenge should keep you entertained for quite a while, and the quality of the system is high enough to make *Clash: Ethereal* worth the cost.—RICK TEVERBAUGH

\$17.95, 48K disk. Imagists Group, 9721 Ashbourn Drive, Burke, VA 22015. (703) 764-0835.

CIRCLE 258 ON READER SERVICE CARD

STAR NR-10

Reviewed by Gregg Pearlman

The fast, feature-laden **Star NR-10** can be considered the top-of-the-line Star Micronics 9-pin dot-matrix printer. Look at the speed comparison chart (*Figure 1*) and you'll see that the NR-10 left **Antic's** other dot-matrix printers in the dust. The NR-10 printed a document of exactly 20,000 characters at 148 characters per second (cps) in 10-pitch and 40 cps in near letter quality (NLQ).

Draft quality text on the NR-10 looks about the same as on Star NL and NX series printers—clear and

Figure 1

PRINT SPEED COMPARISON (10-pitch, draft mode)

Printer	cps
Star NR-10	148
Panasonic KXP-1080i	83
Okidata 180	83
Star NL-10	75
Atari SMM804	61
Atari XMM801	51

readable in 10, 12 and 17.1 characters per inch (cpi). However, the NLQ in 10 cpi probably looks better than that of any other nine-pin dot-matrix printer at **Antic**—less obviously “made of dots.” It's still *near* letter quality, but I'd say it's adequate for business correspondence when printing with a dark new ribbon. I'd also say that the NLQ is even better in 12-pitch (12 cpi) than 10-pitch.

The NR-10 supports boldface, enhanced print, italics, underlining, subscript, superscript and double-wide printing. It even boasts a “master print mode” which allows you, in one simple escape code, to mix and match among eight print styles. (Other Star printers such as the NL-10 have this

NR-10 draft printing.

DEGAS graphic on NR-10

NR-10 NLQ printing.

DEGAS default palette printout.

feature too.) Special features include 11 types of international characters, double-sized and quad-sized printing and macro definition.

There's also a proportional 10-pitch setting. (Divide cpl by 8 to get cpi.) The NR-10 panel buttons feature draft and NLQ settings for 80, 96 and 137 characters per line (cpl) although you can't get 137 cpl NLQ. The master print mode somewhat frees you of these boundaries, however. You can combine proportional print with all three print pitches through BASIC or a word processing program that allows user-defined printer codes such as First XLEnt Word Processor or, to a lesser extent, PaperClip. Depending on what settings you might choose in the master print mode, your text could be between 5 and 20 cpi.

The NR-10 yields nice, dark text, but graphics printouts aren't particularly sharp, dark or clear, even with a new ribbon. The NR-10's graphics printouts, while fast, aren't as good as those on the less expensive Panasonic KXP-1080i and Okidata 180 (reviewed in **Antic**, April 1988).

From Antic Publishing, Inc.
An Information Technology Company

[HELP] screen dumps including the ST desktop and game screens took around 85 seconds to print. Screen dumps printed from within DEGAS Elite took between 81 seconds and 106 seconds, depending on how much white space the picture had.

The NR-10 is easy to hook up. The standard Centronics parallel port connects directly to an ST, and is easy enough to connect to an 8-bit Atari via the ICD P:R: Connection or Atari 850 interface. The NR-10 is reasonably quiet, yields goodlooking draft and near letter quality (NLQ) printouts.

On a noise scale of 1 to 10, with 1 being silent and 10 being a daisywheel printer, the NR-10 would rate about 4—you could hold a conversation over the drone of this printer with reasonable comfort. It's a bit quieter than our Star NL-10 (Antic, January 1988), considerably quieter than the Panasonic KXP-1080i, and somewhat louder than the Okidata 180, at least when printing text.

The documentation for the NR-10 runs 233 pages—consisting of eight chapters, seven appendices and an index. Also enclosed is a leaflet titled "Utilizing Star's Technical Support Services," a "Users' Guide" card that discusses the panel switch combinations, self-tests, ribbon installation and automatic paper loading, and a sticker to be placed next to the control panel as a guide to selecting special features on the NR-10.

The appendices occupy about 40% of the manual and cover DIP switch settings, ASCII codes and conversions, function codes, a command summary, technical specifications, a discussion of the parallel interface, and serial interface specifications.

If you can get the Star NR-10 for \$300, snap it up. If you can get it at \$400, you're still in good shape. And even at its top-of-the-line \$579 suggested retail price, the NR-10 still merits serious consideration if speed and outstanding NLQ text are sufficiently important to you. ■

MAGIC SAC PROFESSIONAL

ST's MacEmulator is better than ever

Reviewed by Jim Pierson-Perry

Mary Rhomberg Pelouquin

IT BEGAN INNOCENTLY ENOUGH. Dave Small and co-conspirators reasoned that since the Apple Macintosh and ST computers are based on the same microprocessor, transplanting the Mac boot ROM chips, with supporting software, into the ST should let it run Mac software. From that central idea—and months of frenzied programming—came the Magic Sac.

Even before going on sale, the Magic Sac had become legendary in the Atari community. The idea of running Macintosh software on an ST brought cries of heresy from Apple users—and smug grins from Atari users. The current version, **Magic Sac Plus**, includes a clock/calendar chip and improved software. — continued on page 50

Slaygon, Oids, Hunt For Red October, Police Quest, Space Quest II, Arctic Fox

SLAYGON

Time is running out and the United Defense Force needs your help. Seems like the Cybordynamics Laboratory created a virus that can destroy all human life. You'll control the **Slaygon**, a military robot with the strength of a hundred men and the armor and weapons of a high-tech battle tank. Maneuver the Slaygon through a five-level, 500-room complex and destroy the main computer. Simple!

Below your front view screen, which displays what the Slaygon sees, are the Slaygon's weapons. The cloak device renders the Slaygon invisible to security robots. The battle sensor displays the amount of energy an enemy is currently storing—if it's too high, turn tail and run. The field generator and laser amplifier let you use conventional weapons that you find. The long-range scanner displays objects within scanner range. And the last device shows the energy level of an installed shield or laser you've taken.

Objects you find can be taken, used and dropped. Taking an object saps energy from the Slaygon—when the Slaygon runs out of juice, it's *adios amigos*. And only some of the objects you find are useful.

As you move, the front view screen displays a page-flipped 3-D environment (I'd prefer real-time 3-D) consisting of hallways and doors which start to look alike after a while. There are

five levels, and finding a security pass gives you access to the next level. Some doors are locked, and some are guarded by a security robot.

There are traps that can prove fatal. At one point you'll face several obstacles that you *must* overcome. The best strategy is to use the correct weapon or object for each challenge—wasting energy is the worst thing you can do.

The small manual explains the functions of the Slaygon very well. There is a section with hints and tips for those hair-pulling situations. Despite a few minor drawbacks, Slaygon is fun.—SCOTT TUMLIN

\$39.95, color. Microdeal (MichtTron), 576 S. Telegraph, Pontiac, MI 48053. (313) 334-5700.

OIDS

Oids combines the daring rescues of Choplifter, the frantic action of Defender and the precision flying of Lunar Lander for a fantastic arcade shoot-em-up. The cruel, powerful Biocrete have created robot slaves called Oids. In your V-wing fighter you must penetrate the Biocrete defenses, land, pick up eight Oids and return to your mother ship.

You begin with four V-wing fighters, and when you return to the mother ship you get a bonus fighter. When you lose all your fighters, you can continue playing in practice mode. Your weapons include nuclear pellet guns, fired singly or in rapid-fire bursts, and four Nova Bombs, which destroy anything within range. You also have a shield to protect you against Biocrete weapons.

The Biocrete defend their bases with photon guns, missile launchers,

Repulsers, Gravbases, a formidable Home Base and shields. There is also a Biocrete mother ship, protected by a shield. You release the Oids by hitting Biocrete jails with a single pellet, but when you land, you must be careful not to burn any Oids with your exhaust or shield.

The top of the screen displays your score, fuel reserves, shield status, fighters remaining, number of Oids aboard your fighter and the number of Nova Bombs remaining. When you complete a mission, your mother ship takes the Oids to the Oidromida and you receive bonus points. High scores are saved to disk.

Oids' Game Editor is a Lunar Lander construction set that lets you create your own games or edit those already on the game disk. From the Game Library menu you can save or load games to the master game disk or a library disk. Oids is skillfully crafted and detailed. It deserves to be on the wanted list of any arcade game fan.—JOHN MANOR

\$34.95, color. FTL Games, 6160 Lusk Blvd., Suite C206, San Diego, CA 92121. (619) 453-5711.

HUNT FOR RED OCTOBER

The Hunt for Red October, based on the best-selling novel by Tom Clancy, is the first computer submarine game involving nuclear subs and the Cold War milieu. The program parallels the novel, with the twist being that the game is played from the *Soviet* perspective. You, the commander of the Red October, have decided to defect to the United States and surrender your vessel to the U.S. Navy.

To guarantee the cooperation of
continued on page 56

MAGIC SAC PROFESSIONAL

continued from page 47

Now the legend continues with the arrival of **Translator One**, a hardware device that enables your ST disk drive directly read and write Mac disks. There's also the **Magic Printer Driver**, which makes it possible for your Mac software to use an Epson-compatible printer instead of the default Apple ImageWriter printer. All three products can be bought separately, or as a package deal—the **Magic Sac Professional**.

Why would a self-respecting ST owner transform his computer into a Mac? Two good reasons are compatibility and an outstanding software selection. You can get your work done at home by using your ST to mimic the Macs at the office, or share files with Mac-using friends and co-workers.

ST HAT TRICK

For me, the best thing about Magic Sac Professional is that I can use my ST to manage communications between Mac and IBM computers. At work I use a Mac while my secretary and most co-workers use IBM computers. Needless to say, sharing data and writing joint reports was a problem—until now.

Nowadays, I bring my Mac disks home and use my Magic Mac conversion utilities to go from Mac to ST and back. As a bonus, the ST 3.5-inch disk format just happens to be identical to that used by IBM. The data files go back to my co-workers in a form they can use directly, or I can use PC-Ditto and run the necessary IBM software myself—three goals with one shot for the ST!

I get two other benefits from this setup. First, I have modified my ST monochrome monitor to use the full screen size (using simple instructions found on most ST bulletin boards). The ST monitor is much easier on my eyes than the smaller Mac screen, and some Mac programs automatically use the larger window size to display more information. The other advantage is that taking work home lets me leave the office earlier and enjoy more sunny afternoons.

The Magic Sac Professional is an incredible achievement that can benefit anyone who works with a Macintosh system or needs application programs that are unavailable for the ST. In my hands it has performed flawlessly for four months of regular use. Data Pacific has an excellent reputation for prompt customer support and is active on major national online services. Combined with PC-Ditto, Magic Sac gives the ST the equivalent of three computers in one—and the ability to manipulate files among them. That's real magic in my book.

MAGIC SAC PLUS

The heart of the Magic Sac system, the Magic Sac Plus, consists of a plastic cartridge housing and circuit board for the Mac boot ROM chips and onboard clock/calendar chip, a Mac/ST connection cable and ST program disk. Due to an agreement with Apple, Data Pacific cannot sell the cartridge with the ROM chips installed, so you must

purchase and install them yourself. However, most Magic Sac Plus dealers carry the ROMs, and the installation requires no soldering. The cartridge serves as a real-time clock and can stay plugged in without affecting normal ST programs.

The Magic Sac Plus alone cannot run Mac software from the original disks, due to differences in encoding protocols between the Mac and ST disk drives. You must transfer Mac software to the ST, either by directly connecting the computers and using a supplied conversion program or by downloading from a BBS. In either case, the Magic Sac Plus uses a special disk format of its own, the Magic format, to store the Mac programs. Magic-formatted disks can be single-sided or double-sided, but can't be read by TOS.

To get your "Magic Mac" running, you must provide a Magic boot disk containing the two Macintosh operating system files—Finder and System. These are the equivalent of TOS for the ST and can be found on many Mac program disks, purchased from Apple vendors or downloaded from a Mac BBS. There have been many versions of these two files—some of which are plagued with bugs. Data Pacific recommends Finder 5.4 and System 3.2.

Magic Sac needs at least a 520ST and a single-sided disk drive. Either a monochrome monitor or a color monitor will work. Hard drives are also supported and you can set up a hard disk partition for Magic format while leaving the others in TOS format.

The last step before actually using the system is to specify configuration parameters for memory size, use of hard drive and printer port. Using a smaller memory size (such as 512K with a 1040ST) automatically sets up a memory cache, improving program speed by cutting down on disk access. These parameters can be saved and invoked automatically in the future.

Limitations of the Magic system are that sound, MIDI and Appletalk local networking are not supported. This is because of major differences between the Mac and ST sound chips, and also because the Mac requires additional hardware for MIDI and Appletalk.

Although laser printers aren't supported directly, you can print a Postscript file to disk and then use a roundabout means of sending it to the printer.

Be Warned: you *must* follow the directions in the manual for removing or changing disks. Otherwise, you could damage files. This is due to the Mac operating system, not the ST.

In addition to the system software, the Magic Sac Plus disk also contains programs to initialize disks in Mac, ST or IBM formats; transfer file formats between Mac/Magic and TOS; format a hard disk partition for Mac/Magic use; and read and write to the real-time clock. The most recent release, version 5.9, includes support for Supra and Atari's new hard drives for the Mega computers.

TRANSLATOR ONE

Clearly, the feature most sought-after by Magic Sac Plus users was ability to read and write to Mac disks on ST

drives—in order to run copy-protected software as well as making it much easier to transfer data between the ST and Mac. The problem was that the basic differences between the encoding schemes of Mac and ST drives could not be solved via software alone.

The answer was to create a new ST disk drive controller capable of dealing directly with Mac formats—the Translator One. It connects to the ST via the MIDI and floppy drive ports. During normal ST use or when using Magic-formatted disks it does nothing. However, it turns on when a Mac-formatted disk is inserted and takes over the drive controller functions. When the Mac disk is ejected, the Translator One goes back to sleep. It fits conveniently atop an Atari external drive and has a simple on/off switch.

The only problem comes up if you need Apple's HFS disk management system, which expedites file-handling with double-sided Mac disks and hard drives. Apple's original file management system (MFS) was fine for single-sided disks and hard drives with under 100 files. The Translator One manual provides an extensive explanation of the extra steps for using HFS. You'll need the Apple file, Hard Disk 20, ver. 1.1 from a BBS or Apple vendor.

Save the above file in the system folder of a Magic start-up disk using Finder 5.4 and System 3.2. Bring up the Magic system as usual. Now you can read double-sided Mac disks with the Translator One. The HFS system is downwardly-compatible with MFS, so all of your old Magic-formatted disks will work. The manual also gives instructions for formatting a hard drive partition to use HFS.

While the Translator One is an outstanding product, it has problems with some copy protection schemes, particularly those based on either illegal calls to special Mac chips which aren't in your ST, or Mac-specific timing cycles (the Magic Sac Plus runs faster than a Mac). Fortunately, these mostly apply just to games. The trend is towards removing copy protection on application programs.

MAGIC EPSON PRINTER DRIVER

The final piece of the package, Epstart (by SoftStyle), allows Mac software to use Epson-compatible printers instead of Apple ImageWriters, long the only dot-matrix available for Mac users. Epstart is now released in Magic disk format through Data Pacific. Simply run the program and it will make the printer resource substitution on your application program disks. The printer driver disk must be used as the initial start-up disk for the Epstart program to run correctly and it won't work with HFS-based Magic disks.

Epson models supported include: FX-80/100, MX-80/100, RX-80/100, LX-80 and LQ-1500 as well as the color JX-80. A desk accessory is also installed which allows for print pitch selection and color (for JX-80). On my Star NX-10, using high density pitch, I found the print quality to be better than an ImageWriter's. Both normal and sideways printing are supported by many Mac programs.

MAC SOFTWARE

Speaking bluntly, there are a number of very good Mac application programs that the ST does not (yet) cover. These typically have more features and are easier to use than their ST counterparts (and are priced accordingly!), primarily because of more field-testing with a larger user base.

The list of Magic-compatible software is growing constantly. A major reason is that software developers are hurriedly revising their programs to become compatible with the new Mac II. This means that many "illegal" hooks into the operating system and hardware are being cleaned up—which in turn improves compatibility with Magic Sac Professional. And Data Pacific has done yeoman service by including error trapping routines to avoid problems with certain Mac programs. The best sources for compatibility questions are the Data Pacific message bases on the Genie and CompuServe online services, and a monthly Magic column in Current Notes, the professional-quality magazine of the Washington Area Atari Users Groups.

MY FAVORITE MACWARE

Following is a short and highly selective list of my favorite Macintosh software:

Excel (Microsoft Corp.) is simply the best spreadsheet for any microcomputer. It features integrated calculation, graphic and database operations with sophisticated macros, an extremely intuitive user interface; it reads and writes Lotus 1-2-3 files and runs at blinding speed.

Word (ver. 3.01. Microsoft) is the top-of-the-line word processor for combining text, graphics and multiple fonts. It's a model of what could someday be available on the ST.

OverVUE (ProVUE Development Corp.) is a relational database with an outstanding graphical interface. It fills the void for the ST between entry level programs, such as dB Master One, and high-end powerhouses like dBMAN.

Statworks and **Cricket Graph** (Cricket Software) are for dedicated statistical and graphical data analysis. The nearest approximation would be B/Graph (Batteries Included) for Atari 8-bit computers. We've yet to see a similar product for the ST.

Micro-Planner+ (Micro Planning Software, Ltd.) is a graphics-oriented project management tool. It's very easy to use and provides a wide range of planning and resource management functions. Only the **Logistix** spreadsheet (Progressive Peripherals and Software) offers some of these features for the ST. ■

By GREGG PEARLMAN, *Antic Assistant Editor*

ATTENTION, KUMA SHOPPERS

K-Expert, an intuitive rule-based expert system generator, lets you develop complex fault diagnoses, personnel selection, product purchase decisions and more. An editor is used to create a four-part source file consisting of variables, definitions and forms, definitions of reports, and both "QUERY" and "SOLVE" rules. Six types of variables are built in—strings, reals, dates, booleans, options and confidences. And arithmetic operations can be performed on all types.

About \$150 in English pounds. Kuma Computers Ltd., 12 Horseshoe Park, Pangbourne, Berkshire RG8 7JW, England. 44-7357-4335.

EA JOINS IN

In **Master Ninja** (\$34.95), you guide a ninja assassin through the chambers of an evil warlord's castle to regain a magic sword and dust the warlord. Master Ninja sports over 30 combat screens and 3-D perspective. **Twilight's Ransom** (\$34.95) gives you a big Saturday night date, so you think. What you get is a ransacked apartment, a kidnapped girlfriend and an anonymous phone call suggesting you deliver "the goods" if you ever want to see her again. Your mission, which you'd better accept, is to find out what "the goods" are and deliver them pronto.

It's January, 2087. In **Guardians of Infinity** (\$39.95), you're given the task of preventing the assassination of President Kennedy. Interestingly, time is on your side for a change—because you're Adam Cooper, inventor of the miraculous time sphere. You travel back to Fort Worth, Texas, on November 15, 1963—and you have a week to complete your task and save eternity.

In **Wizard Wars** (\$39.95), you're the champion of the god of passion, who wants you to free the White Unicorn, the astral incarnation of light and order, who has been imprisoned by the evil wizard Aldorin. The White Unicorn must be reunited with the Black Unicorn, the astral embodiment of darkness and chaos, to restore the cosmic balance and ultimately defeat AI.

Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404. (415) 571-7991.

MAIL-PRO FOR LESS

Now that postal rates in the United States have gone up, it's a lucky thing that Hi-Tech Advisers has slashed the price of its popular database and mail merge file manager, **Mail-Pro**, from \$69 to \$39. If you own a \$69 copy, you can receive a free gift certificate toward future purchase of any Hi-Tech software. And despite the price reduction, Mail-Pro still includes a shareware copy of Inventory-Pro, a simple, efficient inventory manager.

\$39. Hi-Tech Advisers, P.O. Box 7524, Winter Haven, FL 33883. (813) 293-3986. Florida: (813) 294-1885.

EASY-TOOLS

If you use Migraph's Easy-Draw for technical, electrical or architectural design, you'll want to have **Easy-Tools** at hand as a desk accessory. Easy-Tools' Angulator lets you measure distances and angles, then save the information for use later on in the Rotator—which simply rotates any object except text and bit-images. The Inquisitor gives you numerical information on selected objects, which you can then edit.

\$49.95. Migraph Inc., 720 South 333rd Street, Suite 201, Federal Way, WA 98003. (206) 838-4677.

FONTZ!

Fontz! is a font editor and conversion utility that lets you convert Macintosh, Amiga, Hippo and DEGAS fonts to GEM format. You can scale the fonts to different sizes and use them with 9-pin or 24-pin printers, as well as Atari's laser printer.

\$34.95. Neocept, 908 Camino dos Rios, Thousand Oaks, CA 91360. (805) 498-3840. Orders: (800) 666-8766.

BOMBER COMMAND

Fly a twin-engine bomber against such land, sea and air targets as moving freight trains, trucks, ships, oilfields, enemy ports and airfields. In **Bomber Command**, you'll dodge flak, attack enemy aircraft—and keep an eye peeled for enemy missiles.

\$39.95. Requires joystick, color monitor. Mars Software Development, Inc., P.O. Box 70947, Pasadena, CA 91107. (800) 541-0900.

QUICK BROWN FOX

The Software Toolbox's **Mavis Beacon Teaches Typing** to those who want more than "asdfghjkl;" and "Now is the time for all good men. . ." Champ typist Mavis checks your progress every step of the way and tailors the perfect typing course to your individual needs, in QWERTY or Dvorak formats. When you make mistakes, Mavis explains things to you—without beeping, buzzing or shocking your fingers. In creating your customized practice exercises, Mavis quotes famous works of literature, riddles, rhymes, jokes and the Guinness Book of World Records—she wants this to be fun, not torture.

The package works with a mouse or joystick and includes 2-D and 3-D graphics, a lifelike keyboard and learning aids and the "Road-Racer" arcade typing game.

\$44.95. The Software Toolworks, One Toolworks Plaza, 13557 Ventura Blvd., Sherman Oaks, CA 91423. (818) 907-6789.

SMOOCH

The high-speed GEM-based **KIS Terminal** is written with the novice online user in mind—but it's no pantywaist. You can run *any* program from within KIS. It features macros for fast log-ins, single keypresses for sending and receiving files as well as turning the capture buffer on and off. Believe it or not, it's all written and compiled in GFA BASIC.

\$29.95. Alpha Tech Computers, 2901 Wayzata Blvd., Minneapolis, MN 55405. (612) 374-3232.

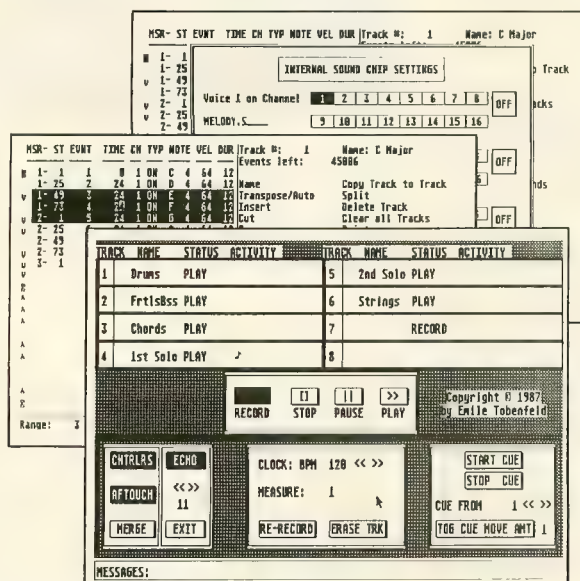

QUICK GFA

The **GFA Quick Reference Guide** book from Abacus gives you fast access to the hundreds of commands and functions in the powerful and accurate GFA BASIC. Chapters cover general information, commands, error messages and three indexes.

\$14.95. Abacus, 5370 52nd Street SE, Grand Rapids, MI 49508. (616) 698-0330.

New ST product notices are compiled from information provided by the products' manufacturers. Antic assumes no responsibility for the accuracy of these notices or the performance of the product.

MIDI Recording Studio™ V1.1 for Atari ST Computers

Features Include:

- Rocky Steady** timing (up to 384 PPQ)
- Totally Mouse-Driven 8-Track** tape recorder interface
- Supports **internal sound chip** and loads G.I.S.T. (Antic voice editor) files
- Mute and Solo** tracks using the mouse in real time
- Full editing** of all MIDI parameters of individual MIDI events
- Edit using the **mouse-controlled HI-LITE** event list (like your favorite word processors)
- Cut, copy, paste, transpose, compress, expand, and scale velocity** on a single event or global basis
- Synchronization** via MIDI clock (send and receive)
- Record while in "CUE" mode** for easy song creation
- Ability to **send any type of MIDI event** including **System Exclusive**
- Auto-correct** (quantize) note timings and durations separately or together to any value
- Real-time tempo adjustment
- Completely compatible with Dr. T's Keyboard Controlled Sequencer and Copyist**
- Supports color or monochrome monitors and 520, 1040, or Mega ST computers

ALL STATEMENTS AND DESCRIPTIONS ON THIS PRICE LIST ARE BELIEVED TO BE CORRECT AT TIME OF PRINTING. MODEL AVAILABILITY AND PRICES ARE SUBJECT TO CHANGE WITHOUT PRIOR NOTICE.

your crew, you have fake orders calling for your entrance into U.S. waters. Your goal is to pilot the Red October into U.S. coastal waters and deliver it—without arousing suspicion. However, the Soviet authorities are on to you and will stop you at all costs.

Of course, your sub has state-of-the-art weapons systems. Sonar not only helps identify any hostile vessels and mines, but also provides a contour map of the ocean floor (running aground is remarkably easy). Torpedoes can be either computer-controlled (automatically locking onto a target) or directed manually. An infrared targeting system makes night battles a lot easier.

This is the first sub game in which you're the hunted instead of the hunter. No points are gained by destroying enemy vessels. In fact, you want to remain as unobtrusive as possible. The graphics are good, and all the commands are mouse-controlled. However, sometimes there's a slight delay between clicking on a command and program response—which can mean certain death in the heat of battle. Fortunately, Red October comes with a save game routine.

If you are a fan of the Hunt for Red October book, or if you enjoy submarine games in general, this one should make it to your shelf.—HARVEY BERNSTEIN

\$39.95, color. IntelliCreations, 19808 Nordhoff Place, Chatsworth, CA 91311. (818) 886-5922.

POLICE QUEST, SPACE QUEST II

Police Quest puts you in the role of a beat cop facing a variety of situa-

tions. Some situations are mundane, others are more headline-making, such as the game's goal—to stop the flow of drugs into a small town. Still other situations are adult in nature. These are handled in a realistic fashion and not intended to give young gamers the giggles. Parents, be warned.

It's not easy to win at **Police Quest: In Pursuit of the Death Angel**. For example, five pages at the back of the manual help you through your first day at the station. Try to do it by yourself—you'll likely figure most of it out. But you'll also be late for the morning briefing, which will end the game abruptly. There's a manual of department regulations you must virtually memorize in order to keep the game in motion for long. While realistic, this is frustrating for new gamers and possibly for those who haven't memorized the dialogue in every "Dragnet" episode. But there is a strong sense of actually becoming the cop on the beat.

Police Quest is well-drawn, colorful and fun to play—or just to watch being played.

After a fashion, **Space Quest II** picks up where the original **Space Quest** game left off. Again you'll assume the persona of Roger Wilco, a brave sanitation engineer. For those who made it through the first episode, *The Sarien Encounter*, the villain in **Space Quest II: Vohaul's Revenge** will seem quite familiar. Sludge Vohaul is back—he's armed and he's peeved. Vohaul has an army of insurance salesmen ready to make your life miserable.

While the object of the game is still to survive long enough to foil the evil plot, the humor in **Space Quest II** makes it easier to shrug off defeat, or maybe laugh it off.

Danger lurks at almost every corner. **Space Quest II** is trickier than the original and graphically superior. The game tests players severely. The programmers evidently recognized this and passed along about nine pages of step-by-step tips on how to get started. My only advice is to save your place often and don't give up the fight.—RICK TEVERBAUGH

\$49.95, color or monochrome. Sierra Online, P.O. Box 485, Coarsegold, CA 93614. (209) 683-6858.

ARCTIC FOX

If you could buy only one game for your Atari ST, it might be **Arctic Fox**, a tank-simulation game reminiscent of Atari's coin-op **Battlezone**—but better in every way. Alien invaders are destroying the Earth's atmosphere. You must find and destroy their main fortress to save humanity. Anything not of this Earth that gets in the way is fair game.

Fortunately, you have the **Arctic Fox** supertank to complete your mission. Your weapons include guided missiles, cannon, dual mine dispensers and smart bombs. You have unlimited shells to lob at alien tanks, fighters and installations. You drop mines to dispatch tanks coming up from behind. After you launch a missile, your radar screen becomes a flight simulator-type view through the missile's nose camera. When you spot a target you can set your missile to home in on it single-mindedly.

The aliens' weapons include heavy and light tanks, high speed fighters, floating mines that track you, deadly rocket launchers and reconnaissance sleds and flyers.

Stealth is important. Alien radar stations spot you, hide their own tanks and jam your missile's radar. The alien communications fort dispatches all the strikes against you. Destroying it will make things easier.

When you are finally done in by the aliens your view window cracks. A final score and a list of alien units you destroyed are displayed, as well as a

continued on next page

description of how you were killed. (The Arctic Fox was driven over a cliff, etc.)

The Enemy Preview level of Arctic Fox displays and describes each alien unit. Training options include Turbo, Invisibility, Blizzard, Jump Up, Big Radar Map, Tough Fox and Cockpit Off. The Training Mode ends quickly, however—I'd like to have continued blasting away at the aliens. Also, more could have been done with the ST's sound and music capabilities.

But I loved the way that the 3-D graphics put you into a realistic arctic world where you drive your super-tank across the tundra to save humanity while the aliens do their best to stop you. For all you frustrated rush-hour drivers, Arctic Fox will let you get through heavy (and heavily armed) traffic in style. This is a game you will return to play time and time again.—JOHN MANOR

\$39.95, color. Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404. (415) 572-ARTS; (800) 562-1112. In CA, (800) 562-1112.

BEYOND ZORK

Beyond Zork attempts to improve upon Infocom's time-honored text adventure style by merging it with fantasy role-playing elements.

This game does not take place in Zork's Great Underground Empire, but in the Southlands of Quendor on the other side of the river. Aside from occasional references to Zorkmids, grues and the like, this in no way follows the storyline set in Zorks I-III—Infocom's first big hit.

The storyline is that magic is failing throughout the Southlands and only one brave adventurer (guess who!) can brave the pitfalls and dangers to recover the fabled Coconut of Quendor. Beyond Zork monitors your character's advancement in six key qualities—Endurance, Strength, Dexterity, Intelligence, Compassion and Luck as well as weapons and armour strength. And as in other role-playing games there

is combat galore. It seems as if every other room contains discipline crabs, dornbeasts, etc. This "hack-and-slash" approach is not what we have come to expect from Infocom game.

Macros on the 10 function keys are now provided for the common commands such as examine, drop, take, etc. The text is in color (red, white and blue). The most obvious addition is a self-mapping feature. As you explore the world of Beyond Zork a map (without labels) is updated in the upper right-hand corner of the screen, with rectangles representing nearby rooms and lines indicating possible exits. This eliminates the need to type in direction commands. You can either use the mouse to point and click on a line indicating the direction that you wish to travel, or use the arrow keys. Wonder what will happen if you jump off the bridge? Now you no longer need to save the game first. Beyond Zork comes with a handy "Undo" command that back-steps you one place if you find you did something disastrous (or just plain stupid).

But all the changes I've outlined take *memory* and something had to be sacrificed. Unfortunately, Beyond Zork sacrificed exactly what Infocom writers do best—lots of descriptive text with a loving eye for detail that adds a sense of realism to good adventures. Where once there were paragraphs of description when you first entered a room, now there are two or three sentences. Want a description of a creature you've encountered? The game refers you to the *picture* and text in the package's "Lore and Legends of Quendor" booklet.

It's not intrinsically a bad thing to take advantage of the larger memory in today's personal computers by adding all sorts of bells and whistles to the established Infocom format. But if adding those bells and whistles cuts into the heart of your product, is the trade-off worth it?—HARVEY BERNSTEIN

\$39.95, color or monochrome. Infocom, 125 CambridgePark Drive, Cambridge, MA 02140. (617) 576-3190.

QUEST FOR CLUES

(book)

Origin Systems Inc.
136 Harvey Road, Bldg. B
Londonderry, NH 03053
(603) 644-3360
\$24.99

At last—help for the clueless. The **Quest for Clues** book contains solutions to 50 popular text adventure and fantasy role-playing games including Autoduel, Ultima IV, Bard's Tale and King's Quest III, as well as more than 80 detailed, easy-to-read maps. Major clues are encoded, so you don't accidentally discover more than you need. An overview of each game is provided to help you decide on future purchases. The package also features "Golden Age of Adventure," an account of the evolution of computer games.

ARM + C & D

(adventure maps)

Mars Merchandising
15 W. 615 Diversey
Elmhurst, IL 60126
(312) 530-0988
\$10

Players of Intellicreations' Alternate Reality game will benefit from the guidance of these two maps. **ARM + C** (\$4.95) locates every guild, bank, casino, dungeon entrance, trap and secret wall in the city of Xebec's Demise. Also includes a list of 52 potions and a journal for recordkeeping. **ARM + D** (\$5.95) details all four levels of the dungeon and gives hints for survival.

Return the favor. When you call a manufacturer or supplier about a product you've seen advertised or otherwise mentioned in ANTIC, please tell them so. This will help us to continue to bring you the latest information about products that will make your Atari computer an even more valuable investment in the future.

Lycocomputer Marketing & Consultants

Lycocomputer Means Total Service.

Mark "Mac" Bowser, Sales Manager

I would personally like to thank all of our past customers for helping to make Lycocomputer one of the largest mail order companies and a leader in the industry. Also, I would like to extend my personal invitation to all computer enthusiasts who have not experienced the services that we provide. Please call our trained sales staff at our toll-free number to inquire about our diverse product line and weekly specials.

First and foremost our philosophy is to keep abreast of the changing market so that we can provide you with not only factory-fresh merchandise but also the newest models offered by the manufacturers at the absolute best possible prices. We offer the widest selection of computer hardware, software and accessories.

Feel free to call Lycocomputer if you want to know more about a particular item. I can't stress enough that our toll-free number is not just for orders. Many companies have a toll-free number for ordering, but if you just want to ask a question about a product, you have to make a toll call. Not at Lycocomputer. Our trained sales staff is knowledgeable about all the products we stock and is happy to answer any questions you may have. We will do our best to make sure that the product you select will fit your application. We also have Saturday hours — one more reason to call us for all your computer needs.

Once you've placed your order with Lycocomputer, we don't forget about you. Our friendly, professional customer service representatives will find answers to your questions about the status of an order, warranties, product availability, or prices.

Lycocomputer stocks a multimillion dollar inventory of factory-fresh merchandise. Chances are we have exactly what you want right in our warehouse. And that means you'll get it fast. In fact, orders are normally shipped within 24 hours. Free shipping on prepaid orders over \$50, and there is no deposit required on C.O.D. orders. Air freight or UPS Blue/Red Label shipping is available, too. And all products carry the full manufacturers' warranties.

I can't see why anyone would shop anywhere else. Selection from our huge in-stock inventory, best price, service that can't be beat—we've got it all here at Lycocomputer.

Tech Tips

Don't type the
TYPO II Codes! 

DEFAULTWRITER PLUS

Paul Alhart of Lompoc, California originally wrote this program for the Atari Federation users group newsletter.

Whenever you load AtariWriter Plus, you must go to the Global Menu and set the defaults the way you want them. If you want to do double-column condensed printing for a newsletter, then it's back to the Global Menu to set the font, left and right margins, *second* left and right margins, etc. Wouldn't it be nice to have all this already programmed in? Well, you can. You can even have two different sets of your own defaults loaded in at the same time.

At the bottom of the Global Menu it says, "Press TAB for defaults." There are already two sets of defaults: Atari just chose to make them both the same. The first set loads when the program is first booted, and the second set loads when you press [TAB] from the Global Menu. The only catch is that they aren't the defaults we want, so we'll just have to change them. That's exactly what DefaultWriter Plus lets you do. And it works on either the 48K or the 130XE versions of AtariWriter Plus.

1. Carefully type in this listing and SAVE it to disk. Double-check lines 700 to 730.

2. Copy the file AP.OBJ from your AtariWriter Plus disk onto a freshly formatted, single-density disk. Make another copy just to be safe.

3. RUN DefaultWriter Plus and follow the prompts. You can enter any number from 0 to 255 for each default value, but AtariWriter Plus is fussy. Page Wait for instance can only be a 0 or a 1, so be careful.

5. Copy AP.OBJ back to your AtariWriter Plus Disk.

That's all there is to it. You now have two sets of your own defaults: One when AtariWriter Plus first loads, and the other when you press [TAB] from the Global Menu.

NOTE: AtariWriter Plus uses a bad sector for its copy protection. This sector is not actually part of the AP.OBJ file, or any of the files for that matter. So you can copy the files back and forth without problem. However, don't format your AtariWriter Plus Disk—the program checks for the bad sector and won't run without it. ■

Compute Your Roots

The Only Complete
Genealogy Package For
Atari Computer Systems

Compute Your Roots for the Atari ST Systems

Designed for both small and extensive genealogy projects, COMPUTE YOUR ROOTS features:

- * Gem Based
- * Complex Database
- * Fast, multiple field searches
- * DOS Compatible Forms
- * Family Group Sheet
- * Marriage Entry Form
- * Enhanced Data Entry System
- * Automatic Pedigree Links
- * Note References
- * Pedigree Charts
- * Individual Entry Form
- * Sorted Lists

The program has been specially designed to take full advantage of the Atari ST's power. Its extensive array of tools is available for color monochrome ST's with at least 512K.

Compute Your Roots for the Atari 8 bit Systems

- * Pedigree Charts
- * Family Group Sheets
- * History Writer
- * Chart Searcher
- * Cui & Paste Pedigree Charts
- * Simple & Double Density
- * Simple & Colorful Menus
- * 10 & 15 inch Printouts

COMPUTE YOUR ROOTS comes fully equipped with plenty of genealogy tools. The pedigree chart program has a built-in ultra fast search that searches a chart in less than four seconds. A special cut and paste location program has also been included. This lets you easily transfer chart information from one chart to another. Just think...in the computer do all the work. For Atari 8 bits with 48K, disk drive, basic language, 10 or 15 inch printer.

How do they do it?

How do the professional software developers:

Control so many moving objects?

Play beautiful music on your computer?

Check your document for spelling errors?

It is YOUR computer, so shouldn't you know how the software you buy for it works?

NOW YOU CAN FIND OUT!

With MLTMDIS, you can now LIST any machine language program as assembly language source. You can even change it, and reassemble it!

MLTMDIS is a sophisticated piece of software that has been used by professionals to unlock the secrets of competitors' products. MLTMDIS is 100% machine language, and extremely fast!

Send only \$19.95 + \$2 postage and handling to PMW Technology, 1140 N. Higley, Suite 109-310, Mesa, AZ 85205. (add \$3.90 for COD)

GENERAL INFORMATION: Advertisers using Post Office Box numbers in their ads must supply permanent address and telephone numbers. Ad will appear in the next available issue after receipt unless otherwise specified.

DEADLINE: 90 days prior to cover date (e.g., September 1988 closes June 1, 1988—September issue on sale August 1, 1988).

Clip this coupon, attach to typewritten copy and send with remittance to address above.

HANDWRITTEN COPY WILL NOT BE ACCEPTED.

Antic Special Survey

Antic is offering readers like YOU the chance to make this magazine exactly what you want it to be. Tell the editors what should go into Antic that would encourage you to subscribe.

Here is a short questionnaire you can complete in a few minutes and mail to: **Antic Survey**, 544 Second Street, San Francisco, CA 94107. It's important that you send your reply early enough to arrive for counting **by July 5**. If you don't want to tear this page out of your magazine, you could photocopy it.

Please check off whether you want these topics covered in Antic MORE than they are now, the SAME amount as now, or LESS than now!

Please write the PERCENTAGE of total Antic pages you think should be given to each of the following kinds of material. Don't worry if your percentages don't add up to a total of 100%—we are just interested in the relative strength of your likes and dislikes. But please note that there are 22 topics which would each be about 4.5% if equal—as well as two general categories (programs and text articles) which would each be 50% if equal.

PUBLISH IT IN LESS THAN AN HOUR!

Introducing The...

TIMEWORKS DESKTOP PUBLISHER ST™

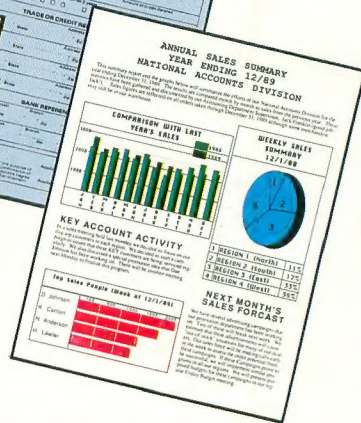

A full-featured, fully integrated desktop publishing powerhouse with word processing, page layout, typesetting, and graphics.

Even if you have no design skills or publishing experience, you can get results in less than an hour with THE TIMEWORKS DESKTOP PUBLISHER ST!

For all its state-of-the-art ability, PUBLISHER ST is incredibly easy to learn—refreshingly so. PUBLISHER ST combines the familiar GEM User Interface, our Quick-Start Mini-Manual, a full complement of Help Screens, and the practical WYSIWYG (What-You-See-Is-What-You-Get) display—all designed to get you up and running in less than one hour!

SPECIAL FEATURES

- **GEM User Interface:** It's fast and easy. Pull-down menus, icons, scroll bars, and dialogue boxes help you learn and use the program quickly. Your display screen shows you exactly what your final product will look like when you print—What-You-See-Is-What-You-Get!
- **Flexible Page Layout:** Use your mouse to overlap, reposition, or resize your text columns & graphics. Change your layout or experiment—almost effortlessly!
- **Built-In Fonts:** Chose from thousands of possible type-style combinations! Opt for bold, italic, underlined, outlined, light, and superscript or subscript characters. Type sizes range from 7 to 96 point.
- **Premium Quality Printouts:** PUBLISHER ST uses a special high density printout format to give you superior quality printouts on your dot matrix or laser printer.
- **Built-In Word Processor:** All the features necessary for everyday word processing, plus most of the sophisticated features found in complete word processing programs.
- **Text Importing:** Load documents directly from WORD WRITER ST, FIRST WORD, and FIRST WORD PLUS* or from any standard ASCII file.

- **Built-In Graphic Toolbox:** Draw lines, boxes, circles, polygons, and more. Plus, choose from a wide variety of built-in line and fill patterns.
- **Graphics Importing:** Import graphics created with popular drawing programs—such as DEGAS, NEOCHROME, & EASY DRAW.* Crop & scale to fit your document.
- **Kerning & Leading:** Adjustable letter and word spacing add those professional "finishing touches" to your document.
- **Automatic Text Flow & Word Wrap:** Flows text around graphics; and from column to column on the same page, or carries it over to subsequent pages.

- **Multiple Page Views:** View, edit, and layout pages at actual, double or half-size. Or, reduce them so the entire page fills the screen.
- **Professionally Drawn Graphics:** Ready-to-use art makes your documents even more eye-catching.
- **Plus you get special time-saving features, sample documents & more!**
